

Mitsubishi Electric Industrial Robot

CR800-D Controller

RV-8CRL Standard Specifications Manual

Safety Precautions

Always read the following precautions and the separate "Safety Manual" before starting use of the robot to learn the required measures to be taken.

-  **CAUTION** All teaching work must be carried out by an operator who has received special training. (This also applies to maintenance work with the power source turned ON.)
Enforcement of safety training
-  **CAUTION** For teaching work, prepare a work plan related to the methods and procedures of operating the robot, and to the measures to be taken when an error occurs or when restarting. Carry out work following this plan. (This also applies to maintenance work with the power source turned ON.)
Preparation of work plan
-  **WARNING** Prepare a device that allows operation to be stopped immediately during teaching work. (This also applies to maintenance work with the power source turned ON.)
Setting of emergency stop switch
-  **CAUTION** During teaching work, place a sign indicating that teaching work is in progress on the start switch, etc. (This also applies to maintenance work with the power source turned ON.)
Indication of teaching work in progress
-  **DANGER** Provide a fence or enclosure during operation to prevent contact of the operator and robot.
Installation of safety fence
-  **CAUTION** Establish a set signaling method to the related operators for starting work, and follow this method.
Signaling of operation start
-  **CAUTION** As a principle turn the power OFF during maintenance work. Place a sign indicating that maintenance work is in progress on the start switch, etc.
Indication of maintenance work in progress
-  **CAUTION** Before starting work, inspect the robot, emergency stop switch and other related devices, etc., and confirm that there are no errors.
Inspection before starting work

The points of the precautions given in the separate "Safety Manual" are given below.
Refer to the actual "Safety Manual" for details.

 **DANGER**

When automatic operation of the robot is performed using multiple control devices (GOT, programmable controller, push-button switch), the interlocking of operation rights of the devices, etc. must be designed by the customer.

 **CAUTION**

Use the robot within the environment given in the specifications. Failure to do so could lead to a drop or reliability or faults. (Temperature, humidity, atmosphere, noise environment, etc.)

 **CAUTION**

Transport the robot with the designated transportation posture. Transporting the robot in a non-designated posture could lead to personal injuries or faults from dropping.

 **CAUTION**

Always use the robot installed on a secure table. Use in an instable posture could lead to positional deviation and vibration.

 **CAUTION**

Wire the cable as far away from noise sources as possible. If placed near a noise source, positional deviation or malfunction could occur.

 **CAUTION**

Do not apply excessive force on the connector or excessively bend the cable. Failure to observe this could lead to contact defects or wire breakage.

 **CAUTION**

Make sure that the workpiece weight, including the hand, does not exceed the rated load or tolerable torque. Exceeding these values could lead to alarms or faults.

 **WARNING**

Securely install the hand and tool, and securely grasp the workpiece. Failure to observe this could lead to personal injuries or damage if the object comes off or flies off during operation.

 **WARNING**

Securely ground the robot and controller. Failure to observe this could lead to malfunctioning by noise or to electric shock accidents.

 **CAUTION**

Indicate the operation state during robot operation. Failure to indicate the state could lead to operators approaching the robot or to incorrect operation.

 **WARNING**

When carrying out teaching work in the robot's movement range, always secure the priority right for the robot control. Failure to observe this could lead to personal injuries or damage if the robot is started with external commands.

 **CAUTION**

Keep the jog speed as low as possible, and always watch the robot. Failure to do so could lead to interference with the workpiece or peripheral devices.

 **CAUTION**

After editing the program, always confirm the operation with step operation before starting automatic operation. Failure to do so could lead to interference with peripheral devices because of programming mistakes, etc.

 **CAUTION** Make sure that if the safety fence entrance door is opened during automatic operation, the door is locked or that the robot will automatically stop. Failure to do so could lead to personal injuries.

 **CAUTION** Never carry out modifications based on personal judgments, or use non-designated maintenance parts.
Failure to observe this could lead to faults or failures.

 **WARNING** When the robot arm has to be moved by hand from an external area, do not place hands or fingers in the openings. Failure to observe this could lead to hands or fingers catching depending on the posture.

 **CAUTION** Do not stop the robot or apply emergency stop by turning the robot controller's main power OFF. If the robot controller main power is turned OFF during automatic operation, the robot accuracy could be adversely affected. Moreover, it may interfere with the peripheral device by drop or move by inertia of the arm.

 **CAUTION** Do not turn off the main power to the robot controller while rewriting the internal information of the robot controller such as the program or parameters.
If the main power to the robot controller is turned off while in automatic operation or rewriting the program or parameters, the internal information of the robot controller may be damaged.

 **DANGER** Do not connect the Handy GOT when using the GOT direct connection function of this product. Failure to observe this may result in property damage or bodily injury because the Handy GOT can automatically operate the robot regardless of whether the operation rights are enabled or not.

 **DANGER** Do not remove the SSCNET III cable while power is supplied to the multiple CPU system or the servo amplifier. Do not look directly at light emitted from the tip of SSCNET III connectors or SSCNET III cables of the Motion CPU or the servo amplifier. Eye discomfort may be felt if exposed to the light. (Reference: SSCNET III employs a Class 1 or equivalent light source as specified in JIS C 6802 and IEC60825-1 (domestic standards in Japan).)

 **DANGER** Do not remove the SSCNET III cable while power is supplied to the controller. Do not look directly at light emitted from the tip of SSCNET III connectors or SSCNET III cables. Eye discomfort may be felt if exposed to the light. (Reference: SSCNET III employs a Class 1 or equivalent light source as specified in JIS C 6802 and IEC60825-1 (domestic standards in Japan).)

 **DANGER** Attach the cap to the SSCNET III connector after disconnecting the SSCNET III cable. If the cap is not attached, dirt or dust may adhere to the connector pins, resulting in deterioration connector properties, and leading to malfunction.

 **CAUTION** Make sure there are no mistakes in the wiring. Connecting differently to the way specified in the manual can result in errors, such as the emergency stop not being released. In order to prevent errors occurring, please be sure to check that all functions (such as the teaching box emergency stop, customer emergency stop, and door switch) are working properly after the wiring setup is completed.

 **CAUTION** Use the network equipments (personal computer, USB hub, LAN hub, etc) confirmed by manufacturer. The thing unsuitable for the FA environment (related with conformity, temperature or noise) exists in the equipments connected to USB. When using network equipment, measures against the noise, such as measures against EMI and the addition of the ferrite core, may be necessary. Please fully confirm the operation by customer. Guarantee and maintenance of the equipment on the market (usual office automation equipment) cannot be performed.

 **CAUTION** To maintain the safety of the robot system against unauthorized access from external devices via the network, take appropriate measures.
To maintain the safety against unauthorized access via the Internet, take measures such as installing a firewall.

*CR800 controller

Notes of the basic component are shown.

CAUTION Please install the earth leakage breaker in the primary side power supply of the controller because of leakage protection.

Note 1) Always use the terminal cover for the earth leakage breaker.

1) Prepare the following items.

Part name	Specifications	Remarks
Earth leakage breaker	The following is recommended product. Single phase: NV30FAU-2P-10A-AC100-240V-30mA (Terminal cover: TCS-05FA2)	Prepared by customer.
Cable for primary power supply	AWG14 (2mm ²) or above	Prepared by customer. Tightening torque for terminal fixing screw is 2 to 3N•m.
Grounding cable	AWG14 (2mm ²) or above	Prepared by customer. Tightening torque for terminal fixing screw is 2 to 3N•m.
ACIN cable	Terminal: M5, cable length: 3m	Supplied with the product.

- 2) Confirm that the primary power matches the specifications.
- 3) Confirm that the primary power is OFF and that the earth leakage breaker power switch is OFF.
- 4) Connect the ACIN cable to the breaker.
Connect the power terminals of the ACIN cable to the secondary side terminals of the earth leakage breaker. Also, ground the FG terminal of the cable.
- 5) Connect the ACIN cable to the ACIN connector on the rear of the controller.
 - <1> Face the main key on the ACIN cable plug upwards. (Refer to the "ACIN cable connection" illustration.)
 - <2> Align the main key of the ACIN cable plug with the grooves on the ACIN connector. Push the plug into the connector as far as it will go.
The plug may be damaged if it is not correctly aligned with the connector.
 - <3> Tighten the coupling on the ACIN cable, turning it to the right until it locks.
- 6) Connect one end of the grounding cable to the PE (protective earth) terminal on the controller and ground the other end (2-point grounding) in order to comply with the requirements of EN 61800-5-1 for the touch current of 3.5 mA AC or more.
- 7) Connect the primary power cable to the primary side terminal of the earth leakage breaker.

■Revision history

Date of print	Specifications No.	Details of revisions
2019-06-24	BFP-A3678	<ul style="list-style-type: none"> • First print.
2019-07-26	BFP-A3678-A	<ul style="list-style-type: none"> • Added "External magnetic field" to "2.1 Standard specifications". • Added the procedure for enabling the safety diagnosis function (STO function).
2019-10-31	BFP-A3678-B	<ul style="list-style-type: none"> • Added additional information to the specifications of the S15. • The safety option (4F-SF002-01) is now available. • Deleted cycle time information. • Added "6.4 EMC installation guideline". • Added the model name of the sensor attachment adapter used for the force sensor set (4F-FS002H-W1000). • Revised "2.2.6 Protection specifications". • Amended the following: "Fig. 3-28: Specifications for the connection cable" "(4) MELSOFT RT ToolBox3/MELSOFT RT ToolBox3 mini/MELSOFT RT ToolBox3 Pro" • Added a figure to "2.1.2 The counter-force applied to the installation surface".
2020-01-24	BFP-A3678-C	<ul style="list-style-type: none"> • Corrected "Fig. 2-1: Positions of the centers of gravity for loads with relatively small volume".

■ Introduction

This series provides compact vertical multi-joint robots for use in machine processes and assemblies.

However, to comply with the target application, a work system having a well-balanced robot arm, peripheral devices or robot and hand section must be structured.

When creating these standard specifications, we have edited them so that the Mitsubishi robot's characteristics and specifications can be easily understood by users considering the implementation of robots. However, if there are any unclear points, please contact your nearest Mitsubishi branch or dealer.

Mitsubishi hopes that you will consider these standard specifications and use our robots.

Note that in this specification document the specifications related to the robot arm is described [Page 9, "2 Robot arm"](#), the specifications related to the controller [Page 30, "3 Controller"](#), and software functions and a command list [Page 91, "4 Software"](#) separately.

This document has indicated the specification of the following types robot.

<Robot type>

- RV-8CRL

- No part of this manual may be reproduced by any means or in any form, without prior consent from Mitsubishi.
- The contents of this manual are subject to change without notice.
- The specifications values are based on Mitsubishi standard testing methods.
- The information contained in this document has been written to be accurate as much as possible. Please interpret that items not described in this document "cannot be performed." or "alarm may occur". Please contact your nearest dealer if you find any doubtful, wrong or skipped point.
- This specifications is original.

1 General configuration

1.1 Structural equipment

Structural equipment consists of the following types.

1.1.1 Standard structural equipment

The following items are enclosed as a standard.

- 1) Robot arm
- 2) Controller
- 3) Machine cable
- 4) Robot arm installation bolts
- 5) CD-ROM (Instruction manual)

1.1.2 Special specifications

For the special specifications, some standard configuration equipment and specifications have to be changed before factory shipping. Confirm the delivery date and specify the special specifications at the order.

1.1.3 Options

User can install options after their delivery. The customer needs to arrange for the installation.

1.1.4 Maintenance parts

Materials and parts for the maintenance use.

1.2 Model type name of robot

This robot has arranged the type name corresponding to load mass, arm length, and environment specification. Details are shown below, please select the robot suitable for the customer's use.

1.2.1 How to identify the robot model

RV - ◇ CR L - D - Sxx

(a) (b) (c) (d) (e) (f)

(a) RV Indicates the vertical multi-joint robot.

(b) ◇ Indicates the maximum load.
8: 8kg

(c) CR Indicates the CR series.

(d) L Indicates long arm type.

(e) D Indicates the controller type.
D: Stand alone type

(f) -Sxx Indicates a special model. In order, limit special specification.
S15: The parallel I/O interface installed on the controller is source type (2D-TZ378). It was originally sink type (2D-TZ368).

1.2.2 Combination of the robot arm and the controller

Table 1-1: Combination of the robot arm and the controller

Robot arm					Controller
Type name	Protection specification	Arm length	Brake	Axial constitution	
RV-8CRL	IP rating ^{Note1)}	Long arm	All axes	6-axis type	CR800-CVD

Note1) This robot arm's protective structure is IP65. The protective structure of all the controllers is IP20 (open type). To protect a controller, use the optional controller protection box (IP54).

1.3 Contents of the structural equipment

1.3.1 Robot arm

The list of structural equipment is shown in below.

6-axis vertical multi-joint robot (RV-8CRL)

* Refer to [Page 9, "2.1 Standard specifications"](#) for details on the specifications.

Machine cable
(Fixed type: 5m)

Machine cable (replaceable type)

- Fixed type: 1F-□□UCBL-43
- Flexed type: 1F-□□LUCBL-43

Note 1)□□ refer the length.
Refer to [Table 1-2](#) for details.

Note 2) Replace the enclosed standard cable with this cable.

[Caution]

Standard configuration equipment

Option

Fig.1-1: Structural equipment

1.3.2 Controller

The devices shown below can be installed on the controller.

The controllers that can be connected differ depending on the specification of the robot. (Refer to [Page 2](#), “1.2 Model type name of robot”.)

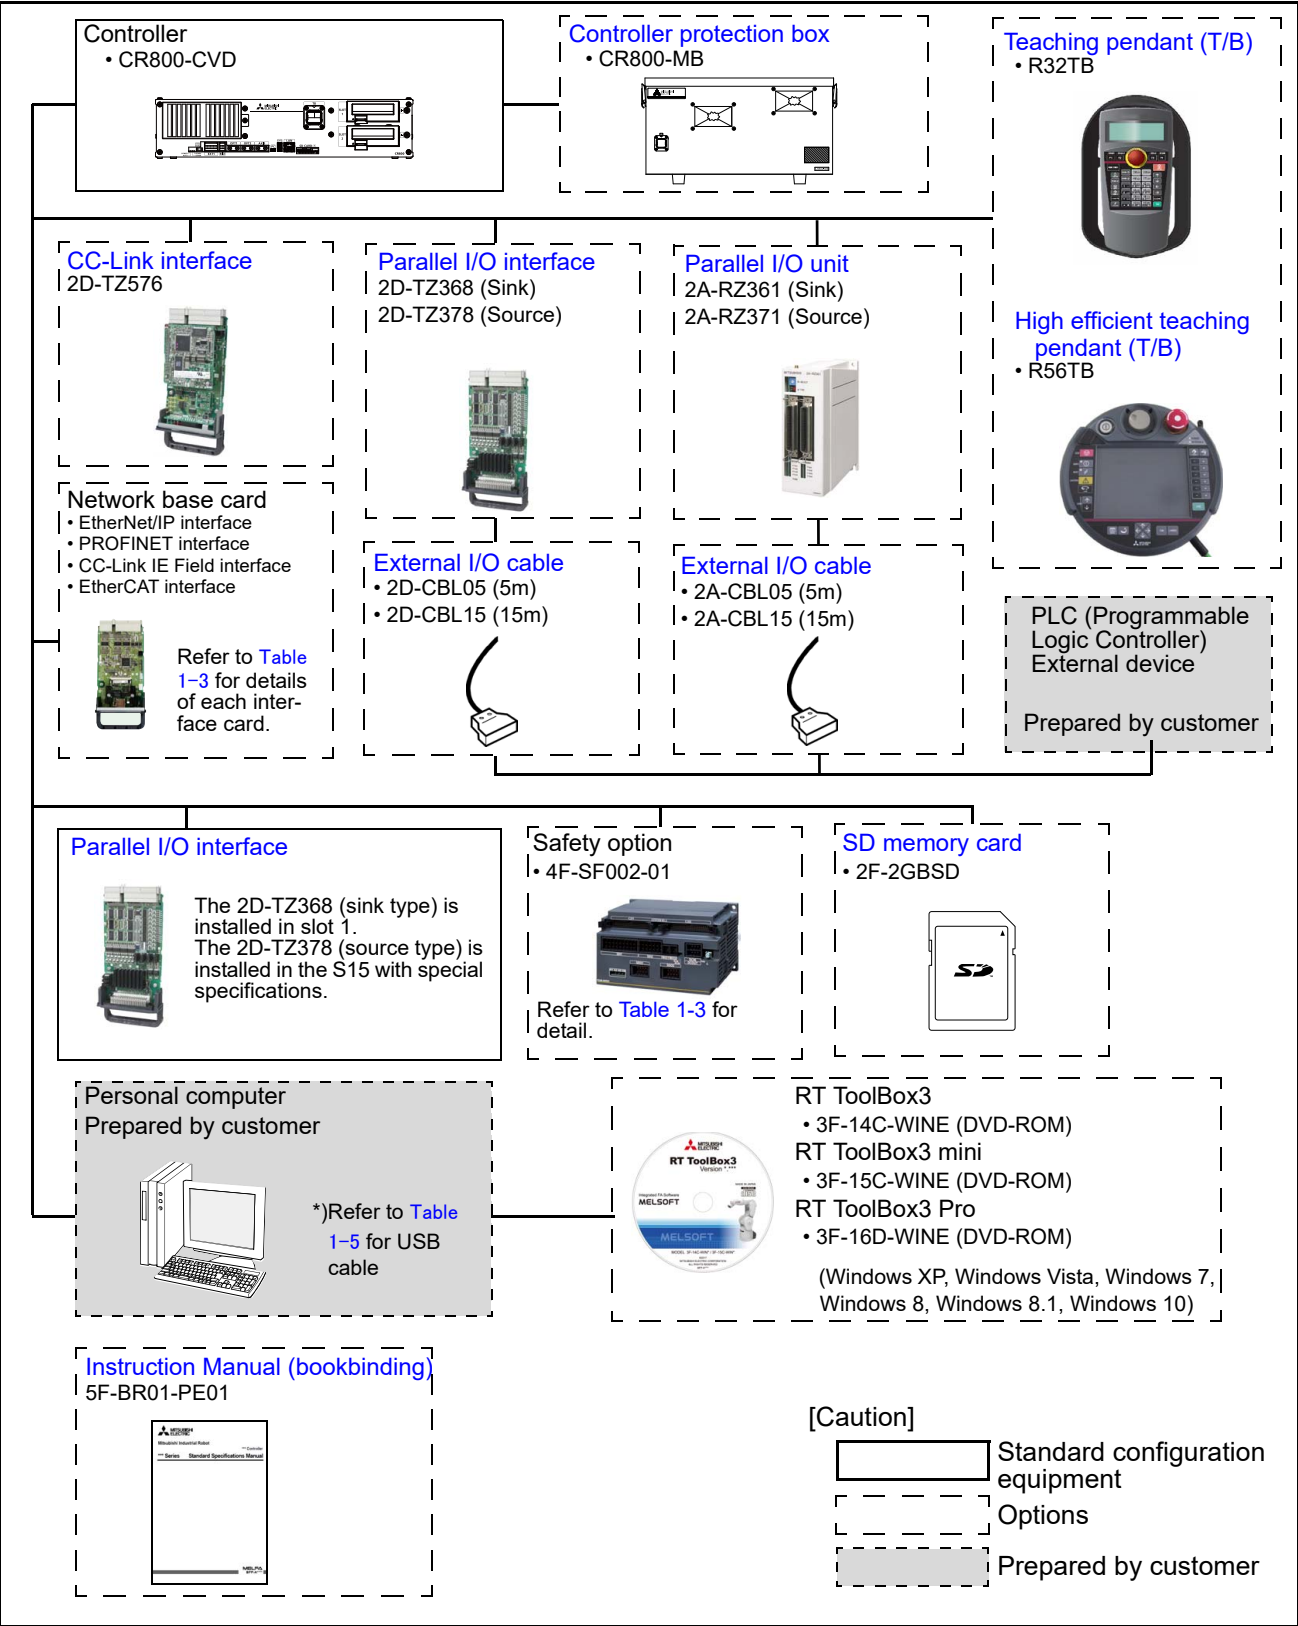

Fig.1-2: Structural equipment

1.3.3 Function extension device

These devices (option) are used to extend the function of the robot.

Fig.1-3: Function extension device

1.4 Contents of the Option equipment and special specification

A list of all Optional equipment and special specifications are shown below.

1.4.1 List of the robot arm option equipment and special specification

Table 1-2: The list of robot option equipment and special specification

Item	Type	Specifications	Classification Note1)	Description
Machine cable (replaceable type)	1F-□□UCBL-43	For fixing	○	"□□" in type shows the length of the cables as follows. 10=10m, 15=15m, 20=20m (The standard cable is 5 m long.)
	1F-□□LUCBL-43	For flexing	○	"□□" in type shows the length of the cables as follows. 10=10m, 15=15m, 20=20m (The standard cable is 5 m long.)

Note1) ○: option.

1.4.2 List of the controller option equipment and special specification

Table 1-3: The list of the controller option equipment and special specification

Item	Type	Specifications	Classification Note1)	Description
Simple teaching pendant	R32TB	Cable length 7m	○	With 3-position enable switch IP65
	R32TB-15	Cable length 15m	○	
Highly efficient teaching pendant	R56TB	Cable length 7m	○	
	R56TB-15	Cable length 15m	○	
Parallel I/O Interface	2D-TZ368(Sink type)/ 2D-TZ378(Source type)	DO: 32 point DI: 32 point Insulated type output signal (0.1A/24V /point) Insulated type input signal (9mA/ 24V /point)	○	The card type external input-and-output. Interface. Install to the slot of controller. The 2D-TZ368 (sink type) is installed in SLOT1 of the robot controller from the factory. The 2D-TZ378 (source type) is installed in the S15 with special specifications.
External I/O cable (For Parallel I/O Interface)	2D-CBL05	5m	○	Use to connect the external peripheral device to the parallel input/output interface.
	2D-CBL15	15m	○	
Parallel I/O Unit	2A-RZ361(Sink type)/2A-RZ371(Source type)	DO: 32 point/ DI: 32 point Insulated type output signal (0.1A/24V /point) Insulated type input signal (7mA/ 24V /point)	○	The unit for expansion the external input/output.
External I/O cable (For Parallel I/O Unit)	2A-CBL05	5m	○	Use to connect the external peripheral device to the parallel input/output unit
	2A-CBL15	15m	○	
CC-Link interface	2D-TZ576	Only Intelligent device station, Local station	○	For MELSEC PLC with CC-Link connection.
Network base card (EtherNet/IP interface)	2D-TZ535	Communication interface for mounting the Anybus CompactCom module manufactured by HMS. The customer needs to prepare the EtherNet/IP module (AB6314) manufactured by HMS.	○	Refer to separate volume "Network Base Card Instruction Manual" for details.
Network base card (PROFINET interface)	2D-TZ535-PN	Communication interface for mounting the Anybus CompactCom module manufactured by HMS. The customer needs to prepare the PROFINET IO module (AB6489-B) manufactured by HMS.	○	Refer to separate volume "Network Base Card Instruction Manual" for details.
Network base card (CC-Link IE Field interface)	2F-DQ535	Communication interface for mounting the Anybus CompactCom module manufactured by HMS. The customer needs to prepare the CC-Link IE Field module (AB6709) manufactured by HMS.	○	Refer to separate volume "Network Base Card Instruction Manual" for details.

Item	Type	Specifications	Classification Note1)	Description
Network base card (EtherCAT interface)	2F-DQ535-EC	Communication interface for mounting the Anybus CompactCom module manufactured by HMS. The customer needs to prepare the EtherCAT module (AB6607) manufactured by HMS.	○	Refer to separate volume "Network Base Card Instruction Manual" for details.
SD memory card	2F-2GBSD	Memory card capacity 2GB.	○	-
Safety option	4F-SF002-01	Item to support the safety I/O.	○	Refer to separate volume "Robot Safety Option Instruction Manual" for details.
Controller protection box	C800-MB	IP54	○	The controller protection box is used to protect the controller from an oilmist or other operating environment.
RT ToolBox3	3F-14C-WINE	DVD-ROM	○	Windows XP, Windows Vista, Windows 7, Windows 8, Windows 8.1, Windows 10 Supporting English. (With the simulation function)
RT ToolBox3 mini	3F-15C-WINE	DVD-ROM	○	Windows XP, Windows Vista, Windows 7, Windows 8, Windows 8.1, Windows 10 Supporting English.
RT ToolBox3 Pro	3F-16D-WINE	DVD-ROM	○	Windows XP, Windows Vista, Windows 7, Windows 8, Windows 8.1, Windows 10 Supporting English.
Instruction Manual	5F-BR01-PE01	RV-8CRL	○	-

Note1) ○: option.

1.4.3 Function extension device

Table 1-4: The list of function extension device

Item	Type name	Specifications	Classification Note1)	Remarks
Force sensor set	4F-FS002H-W200	A set of devices necessary for force sense control function, such as a force sensor, an interface unit, and support software.	○	Refer to separate volume "Force Sense Function Instruction Manual" for details.
	4F-FS002H-W1000 ^{Note2)}			
MELFA-3D Vision	4F-3DVS2-PKG3	A set of devices necessary for the 3D vision sensor function, such as a 3D camera head.	○	Refer to separate volume "MELFA-3D Vision Instruction Manual" for details.
Additional camera head	4F-3DVS2-OPT3	For the optional visual field expander.	○	Power cable: separate wire.
Optional visual field expander	2F-3DVS2-OPT2	Visual field expansion of 20 to 28 degrees.	○	

Note1) ○: option.

Note2) Use the sensor attachment adapter "1F-FSFLGSET-01".

[Reference]:The recommendation products of the USB cable are shown below

Table 1-5: Recommendation article of the USB cable

Name	Type name	Supplier	Outside dimensions
USB cable (USB A type-USB mini B type)	GT09-C30USB-5P	mitsubishi electric system & service co., ltd.	Fig. 1-4
	MR-J3USBCBL3M	mitsubishi electric co., ltd.	Fig. 1-5

⚠ CAUTION

Be careful to the USB cable to apply neither the static electricity nor the noise. Otherwise, it becomes the cause of malfunction.

⚠ CAUTION

Use the network equipments (personal computer, USB hub, LAN hub, etc) confirmed by manufacturer. The thing unsuitable for the FA environment (related with conformity, temperature or noise) exists in the equipments connected to USB. When using network equipment, measures against the noise, such as measures against EMI and the addition of the ferrite core, may be necessary. Please fully confirm the operation by customer. Guarantee and maintenance of the equipment on the market (usual office automation equipment) cannot be performed.

2 Robot arm

2.1 Standard specifications

2.1.1 Basic specifications

Table 2-1: Standard specifications of RV-8CRL robot

Item		Unit	Specifications
Type			RV-8CRL
Environment			Oil mist specification
Degree of freedom			6
Installation posture			On floor, hanging, (against wall ^{Note1)})
Structure			Vertical, multiple-joint type
Drive system			AC servo motor (brake provided on all axes)
Position detection method			Absolute encoder
Motor capacity	Waist (J1)	W	600
	Shoulder (J2)		750
	Elbow (J3)		400
	Wrist twist (J4)		100
	Wrist pitch (J5)		100
	Wrist roll (J6)		100
Operating range	Waist (J1)	Degree	±170
	Shoulder (J2)		±110
	Elbow (J3)		+0 to +165
	Wrist twist (J4)		±200
	Wrist pitch (J5)		±120
	Wrist roll (J6)		±360
Speed of motion	Waist (J1)	Degree/s	288
	Shoulder (J2)		321
	Elbow (J3)		360
	Wrist twist (J4)		337
	Wrist pitch (J5)		450
	Wrist roll (J6)		720
Maximum reach radius (P point)		mm	931
Maximum resultant velocity ^{Note2)}		mm/sec	10,500
Load	Rating	kg	7
	Maximum ^{Note3)}	kg	8
Pose repeatability ^{Note4)}		mm	±0.02
Ambient temperature ^{Note5)}		°C	0 to 40
Mass		kg	41
Allowable moment load	Wrist twist (J4)	N·m	16.2
	Wrist pitch (J5)		16.2
	Wrist roll (J6)		6.86
Allowable inertia	Wrist twist (J4)	kg·m ²	0.45
	Wrist pitch (J5)		0.45
	Wrist roll (J6)		0.10
Tool wiring		-	D-sub 15 pins
Tool pneumatic pipes		-	φ6×2
Supply pressure		MPa	0.54
Protection specification ^{Note6)} ^{Note7)} ^{Note8)}		-	IP65
Painting color		-	Light gray (Equivalent to Munsell: 0.6B7.6/0.2, PANTONE: 428C)
External magnetic field		mT	Less than 10

Note1) When used by mounting on the wall, a special specification that limits the operating range of the J1 axis will be used. Please give an order separately.

Note2) This is the value on the mechanical interface surface when all axes are combined.

Note3) Allowable load when the mechanical interface faces downward at an inclination within ±10° to the vertical direction.

Note4) The pose repeatability details are given in [Page 11, "2.2.1 Pose repeatability"](#)

Note5) Sets the robot's operating environmental temperature as parameter OLTMX. Corresponding to the environment, the continuous control action performance and the overload-protection function are optimized. (Refers to "Optimizing the overload level" described in "Chapter 5 Functions set with parameters" of separate instruction manual/ Detailed explanations of functions and operations for details.)

Note6) The protection specification details are given in [Page 14, "2.2.6 Protection specifications"](#).

Note7) The protection performance may not be ensured depending on the oil characteristics. Please consult the dealer.

Note8) If the controller is used in oil mist or similar environments, use the controller protection box to protect the controller from the environment.

2.1.2 The counter-force applied to the installation surface

The counter-force applied to the installation surface for the strength design of the robot installation surface is shown.

Table 2-2: Value of each counter-force

Item	Unit	Value
Falls moment: M_L	N•m	900
Torsion moment: M_T	N•m	900
Horizontal translation force: F_H	N	1,000
Vertical translation force: F_V	N	1,700

2.2 Definition of specifications

The accuracy of pose repeatability mentioned in catalogs and in the specification manual is defined as follows.

2.2.1 Pose repeatability

For this robot, the pose repeatability is given in accordance with JIS B 8432 (Pose repeatability). Note that the value is based on 100 measurements (although 30 measurements are required according to JIS).

[Caution] The specified "pose repeatability" is not guaranteed to be satisfied under the following conditions.

[1] Operation pattern factors

- 1) When an operation that approaches from different directions and orientations are included in relation to the teaching position during repeated operations
- 2) When the speed at teaching and the speed at execution are different

[2] Load fluctuation factor

- 1) When work is present/absent in repeated operations

[3] Disturbance factor during operation

- 1) Even if approaching from the same direction and orientation to the teaching position, when the power is turned OFF or a stop operation is performed halfway

[4] Temperature factors

- 1) When the operating environment temperature changes
- 2) When accuracy is required before and after a warm-up operation

[5] Factors due to differences in accuracy definition

- 1) When accuracy is required between a position set by a numeric value in the robot's internal coordinate system and a position within the actual space
- 2) When accuracy is required between a position generated by the pallet function and a position within the actual space

2.2.2 Rated load (mass capacity)

The robot's mass capacity is expressed solely in terms of mass, but even for tools and works of similar mass, eccentric loads will have some restrictions. When designing the tooling or when selecting a robot, consider the following issues.

- (1) The tooling should have the value less or equal than the smaller of the allowable inertia and the allowable moment found in [Page 9, "2.1.1 Basic specifications"](#).
The examples of inertia calculation methods are described in [Page 109, "Appendix 1: Inertia calculation method"](#).
- (2) [Fig. 2-1](#) shows the distribution dimensions for the positions of the centers of gravity for loads with relatively small volume. Refer to the figure for designing tooling.
- (3) Even if the load is force, not the mass, design the tooling so that moment does not exceed the allowable moment. Refer to [Page 9, "2.1 Standard specifications"](#) for details of allowable moment value.

[Caution] The mass capacity is greatly influenced by the operating speed of the robot and the motion posture. Even if you are within the allowable range mentioned previously, an overload or generate an overcurrent alarm could occur. In such cases, it will be necessary to change the time setting for acceleration/deceleration, the operating speed, and the motion posture.

[Caution] The overhang amount of the load, such as the mass capacity and the allowable moment of inertia defined in this section, are dynamic limit values determined by the capacity of the motor that drives axes or the capacity of the speed reducer. Therefore, it does not guarantee the accuracy on all areas of tooling. Guaranteed accuracy is measured from the center point of the mechanical interface surface. Please note that if the point of operation is kept away from the mechanical interface surface by long and low-rigid tooling, the positioning accuracy may deteriorate or may cause vibration.

[Caution] Even within the allowable range previously mentioned, an overload alarm may be generated if an ascending operation continues at a micro-low speed. In such a case, it is necessary to increase the ascending speed.

Fig.2-1: Positions of the centers of gravity for loads with relatively small volume

2.2.3 Relationships Among Mass Capacity, Speed, and Acceleration/Deceleration Speed

This robot automatically sets the optimum acceleration and deceleration speeds and maximum speed, according to the load capacity and size that have been set, and operates using these automatically set speeds.

To achieve that, it is necessary to correctly set the actual load data (mass and size of hand and work) to be used. However, vibration, overheating and errors such as excessive margin of error and overload may occur, depending on the robot operation pattern or ambient temperature. In such a case, change the setting value to the +20% range.

If a setting is performed in such a way that it falls below the mounted load, the life span of the mechanism elements used in the robot may be shortened.

(1) Setting Load Capacity and Size (Hand Conditions)

Set up the capacity and size of the hand with the "HNDDAT*" parameter (optimum acceleration/deceleration setting parameter), and set up the capacity and size of the work with the "WRKDAT*" parameter. Numbers 0 to 8 can be used for the asterisk (*) part. Designate the "HNDDAT*" and "WRKDAT*" parameters to be used using the "LoadSet" command in a program.

For more details, refer to the separate "Instruction Manual/Detailed Explanation of Functions and Operations."

It is the same meaning as "LoadSet 0.0" if not using the "LoadSet".

<Factory settings>

	Hand mass	Size X	Size Y	Size Z	Center-of-gravity position X	Center-of-gravity position Y	Center-of-gravity position Z
	[kg]	[mm]	[mm]	[mm]	[mm]	[mm]	[mm]
HNDDAT* =	8.0	100.0	100.0	100.0	0.0	0.0	155.0
WRKDAT* =	0.0	0.0	0.0	0.0	0.0	0.0	0.0

2.2.4 Vibrations at the Tip of the Arm during Low-Speed Operation of the Robot

Vibrations at the tip of the arm may increase substantially during the low-speed operation of the robot, depending on the combination of robot operation, hand mass and hand inertia. This problem occurs when the vibration count specific to the robot arm and the vibration count of the arm driving force are coming close to each other. These vibrations at the tip of the arm can be reduced by taking the following measures:

- 1) Lower the robot's operating speed by approximately 5% from high speed using the Ovrd command.
- 2) Change and move the teaching points of the robot.
- 3) Change the hand mass and hand inertia.

2.2.5 Collision detection

This series have the "collision detection function" which detects the abnormalities by the collision of the robot arm, however initial setting is in invalid condition.

The enable/disable of this function can be changed by parameter: COL and command: ColChk, this function is effective for protect of the robot and of the peripheral equipment.

The abnormalities are detected by the robot's kinetics model, presuming torque necessary for movement at any time. Therefore, the setting parameter (HNDDAT*, WRKDAT*) of the hand and the work piece conditions should be right. And, it may be detected as the collision in movement as speed and motor torque are changed rapidly. (for example, the movement near the place of the origin by linear interpolation, the reversal movement, the cold condition, the operation after long term stoppage)

In such a case, by adjusting the value of the setting parameter (COLLVL, COLLVLJG) of the collision detection level according to actual use environment, the sensitivity of collision detection can be optimized and the damage risk can be reduced further. And, in the operation after the low temperature or long term stoppage, please operate by accustoming at low speed (warm-up), or use the warm-up operation mode.

Refer to the separate instruction manual "Detailed explanations of functions and operations" for details of related parameter.

Table 2-3: Factory-shipments condition

	JOG operation	Automatic
RV-8CRL	Invalid	Invalid

2.2.6 Protection specifications

(1) Types of protection specifications

The robot arm has protection specifications that comply with the IEC Standards. The protection specifications and applicable fields are shown in [Table 2-4](#).

Table 2-4: Protection specifications and applicable fields

Type	Protection specifications (IEC Standards value)	Classification	Applicable field	Remarks
RV-8CRL	IP65	Oil mist specifications	Machine tool (cutting)	Note that if the cutting machine is using abrasive materials, the robot's life will be shortened.
RV-7FRLM (example)	IP67		Machine shop with heavy oil mist Dusty work shop	

CAUTION

Use the controller protection box to protect the controller from the environment when the controller will be used in the environment such as the oil mist shown in the [Table 2-4](#).

The IEC IP symbols define the degree of protection against solids and fluids, and do not indicate a protective structure against the entry of oil.

The IEC standard is described by the following "Information" And, the corrosion of the rust etc. may occur to the robot with the liquids.

"Information"

- The IEC IP65

Protection against water infiltration as specified in IP65 indicates a protective structure that is not harmfully affected when 12.5±5% liters of water is supplied from a test device at a position approx. 3m away in various directions and a water pressure of 30kPa at the nozzle section. The water is filled one minute per 1m² of test device surface area for a total of three minutes.

- The IEC IP67

Protection against water infiltration as specified in IP67 indicates a protective structure that is not harmfully affected, even if the test device dives underwater for the 30 minutes. The diving depth is shown below. When the height of the test device is less than 850 mm, the position of the lowest part is 1 m from the water surface.

When the height of the test device is 850 mm or more, the position of the highest part is 150 mm from the water surface.

(2) About the use with the bad environment

This robot has protection methods that conform to IEC IP65 standards.

Usage conditions are shown below.

- 1) The robot is designed for use in combination with machining device.
- 2) We have confirmed that the robot arm meets the protection specifications by testing it using our specified cutting oil. However, the parts of the controller may be damaged by the cutting oil. When using the controller in an oil mist environment, always use the controller protection box. Our warranty does not cover damages or failure resulting from the robot being operated in any environment where other cutting oils than those listed in the table are used (except cutting oils with respect to which the robot's compatibility with the protection specification is verified through our operability evaluation) or where the robot body may be directly splashed with water, oil or dust in quantities larger than stated in the protection specification.
- 3) Take measures so that the robot will not be exposed to water, oil and/or chips for a long period of time.

Also, entrained water droplets lead to the formation of rust on the robot, but would not usually affect the robot's ability to operate normally.

The warranty is invalid for any faults that occur when the robot is used under the following conditions.

Also, if the cover and/or other parts are damaged by interferences caused by the peripheral devices and the robot, the protection specification (seal performance, etc.) may be degraded. Therefore, please pay extra attention when handling the robot.

Refer to [Page 105, "6.2 Working environment"](#).

- 1) In surroundings that generate inflammable gases or corrosive gasses.
- 2) Atmosphere of the mist containing polish liquid etc.
- 3) Atmosphere in which the water, the oil, and the dust exceeding protection specification fall on the robot arm directly.

2.3 Names of each part of the robot

Fig.2-2: Names of each part of the robot

2.4 Outside dimension • Operating range diagram

*1) The depth in which the screw is tightened is 7.5 to 8mm.

*2) Screw holes (M4, depth: 8) for securing the user wiring and piping.

*3) Dimensions including the minimum bending radius of the machine cable.

Fig.2-3: Outside dimensions

Note) Don't install the robot arm in the position where direct rays or the heat of lighting hits. The skin temperature of the robot arm may rise, and the error may occur.

The following figure shows a robot at the position of:
 $J1=0^\circ$, $J2=0^\circ$, $J3=90^\circ$, $J4=0^\circ$, $J5=0^\circ$, and $J6=0^\circ$

*1) The area which P point cannot be moved: P point cannot move to this area. This limitation is valid at factory shipping, but it can be released by parameter MELTEXS.

Fig.2-4: Operating range diagram

2.4.1 Outside dimensions of machine cables

Note) When using machine cables (replaceable type), refer to [Page 25, "\(1\) Machine cable \(replaceable\): Fixed type"](#) for the cable diameter.

2.5 Tooling

2.5.1 Wiring and piping for hand

Shows the wiring and piping configuration for a standard-equipped hand.

Fig.2-5: Wiring and piping for hand

Connector and pneumatic coupling

No	Name	Qty.	Robot side (Robot arm side)	Counter side	Manufacturer	Remarks
			Connectors, couplings	Connectors		
(1)	Coupling	4	KQ2E06-00NJ	-	SMC	-
(2)	Connector	2	SDB-15PFFS-SL8001	15 pin D-sub connector (with hood) 17JE-23150-02(D8C)-CG (Jack screws: #4-40)	DDK	Enclosed No IP rating assigned.

2.5.2 Internal wiring and piping

The robot has two $\phi 6$ air hoses between the pneumatic inlet on the base and the top part of the forearm.
The hose end section has four coupling bridges for a $\phi 6$ hose on both the base and forearm side.

2.5.3 Internal wiring for the hand cable

The cables for the hand run from the base to the top part of the forearm (AWG #24 (0.2 mm^2) x 15 cores).
The cable ends in connectors as a bridge of data.

Allowable current: 1A

Allowable voltage: 24V

2.5.4 Air supply circuit example for the hand

An example of pneumatic supply circuitry for the hand is shown below.

- 1) Make sure that a surge voltage protection circuit such as a diode is connected to the solenoid coil in parallel.
- 2) When the factory pneumatic pressure drops, as a result of the hand clamp strength weakening, there can be damage to the work. To prevent it, install a pressure switch to the source of the air as shown in Fig. 2-6 and use the circuit described so that the robot stops when pressure drops. Use a hand with a spring-pressure clamp, or a mechanical lock-type hand, that can be used in cases where the pressure switch becomes damaged.
- 3) If the air supply temperature (primary piping) used for the tool etc. is lower than ambient air temperature, the dew condensation may occur on the coupling or the hose surface.

Fig.2-6: Air supply circuit example for the hand

2.5.5 About the Installation of Tooling Wiring and Piping

The customer is required to provide tooling wiring, piping and metal fixtures.

Screw holes are provided on the robot arm for the installation of tooling wiring, piping and metal fixtures.

(Refer to the [Page 17](#), "2.4 Outside dimension • Operating range diagram".)

The length of wiring and piping and the installation position on the robot must be adjusted according to the work to be done by the robot. Please use the following example as reference.

<Precautions>

- After performing wiring and piping to the robot, operate the robot at low speed to make sure that each part does not interfere with the robot arm and the peripheral devices.
- If you install metal fixtures and a solenoid valve using the screw holes on the No.2 arm portion, add the mass of the metal fixtures and the solenoid valve to mass of a hand and set to parameter: HNDDAT. Moreover, Fix the parts, such as a solenoid valve, firmly to prevent the parts getting shaky during operation of a robot.
- Hand signals (900 to 907) are not available.

Fig.2-7: Location of screw holes for fixing wiring/piping

2.6 Options

■ What are options?

There are a variety of options for the robot designed to make the setting up process easier for customer needs.

customer installation is required for the options.

(1) Machine cable (replaceable): Fixed type

■ Order type: • Fixed type 1F-□□UCBL-43

Note) The numbers in the boxes □□ refer the length.

■ Outline

The fixed type machine cable can be used instead of the supplied one (5 m) to extend the distance between the controller and the robot.

■ Configuration

Table 2-5: Configuration equipment and types

Part name	Type ^{Note1)}	Qty.	Mass (kg) ^{Note2)}	Remarks
Fixed type machine cable (replaceable)	1F-□□UCBL-43	1 cable	5.4 (10m) 7.8 (15m) 10.1 (20m)	10m, 15m or 20m each
Instruction Manual (cable replacement guide-lines)	BFP-A3691	1pc	-	-

Note1) The numbers in the boxes □□ refer the length.

Note2) Mass indicates one set.

(2) Machine cable (replaceable): Flexed type

■Order type: ● Flexed type 1F-□□LUCBL-43

Note) The numbers in the boxes □□ refer the length.

■Outline

These cables consist of flexed cables, and used for extending the distance between the controller and the robot arm. Replace the enclosed standard cables (5m) with these cables.

■Configuration

Table 2-6: Configuration equipment and types

Part name	Type ^{Note1)}	Qty.	Mass (kg) ^{Note2)}	Remarks
Flexed type machine cable (replaceable)	1F-□□LUCBL-43	1 cable	11.1 (10m) 15.4 (15m) 19.8 (20m)	10m, 15m or 20m each
Nylon clamp	NK-24N	2 pcs.	-	-
Silicon rubber	-	2 pcs.	-	-
Instruction Manual (cable replacement guide-lines)	BFP-A3691	1pc	-	-

Note1) The numbers in the boxes □□ refer the length.

Note2) Mass indicates one set.

■Specifications

The specifications for the fixed type cables are the same as those for standard cables. Shows usage conditions for flexed type cables in [Table 2-7](#).

Table 2-7: Conditions for the flexed type cables

Item	Specifications
Minimum flexed radius	100mm or more
Cableveyor, etc., occupation rate	50% or less
Maximum movement speed	2,000mm/s or less
Guidance of life count	7.5 million times (With silicone grease coating)
Environmental proof	IP54
Cable configuration	φ8.9x3, φ6.5x6, φ6.2x4, φ6x2

[Caution] The guidance of life count may greatly differ according to the usage state items related to [Table 2-7](#) and to the amount of silicon grease applied in the cableveyor.

Recommendation grease: G-501 (Supplier: Shin-Etsu Chemical Co., Ltd.)

[Caution] When a cableveyor is used, partitions are required to avoid overlapping or riding up of the cables. Also, adjust the cable length to eliminate tension or excessive looseness, and fix it securely.

■ Cable configuration

The configuration of the flexible cable is shown in [Table 2-8](#). Refer to this table when selecting the cable.

Table 2-8: Cable configuration (Flexed type)

Item	Motor signal cable		Motor power cable	
	AWG #24 (0.2mm ²)-4P	AWG #28 (0.08mm ²)-4P	AWG #16 (1.25mm ²)-4C	AWG #18 (0.75mm ²)-3C
Finish dimensions	Approx. $\phi 6$ mm	Approx. $\phi 6.2$ mm	Approx. $\phi 8.9$ mm	Approx. $\phi 6.5$ mm
No. of cables used	2	4	3	6
No. in total	6		9	

■ Fixing the flexible cable

- (1) Connect the connector to the robot arm.

The connection method to a robot arm is the same as a standard machine cable. Please refer to the separate "Instruction Manual/ROBOT ARM SETUP & MAINTENANCE" and connect.

- (2) Wind the silicon rubber around the cable at a position 300 to 400 mm from the side of robot arm and extension section as shown below, and fix with the nylon clamp to protect the cable from external stress.

Fig.2-8: Fixing the flexible cable

2.7 About Overhaul

Robots which have been in operation for an extended period of time can suffer from wear and other forms of deterioration. In regard to such robots, we define overhaul as an operation to replace parts running out of specified service life or other parts which have been damaged, so that the robots may be put back in shape for continued use. As a rule of thumb, it is recommended that overhaul be carried out before the total amount of servo-on time reaches the specified time (24,000 hours for the robot arm and 36,000 hours for the controller). However, the degree of the equipment's wear and deterioration presumably varies depending on their operating conditions. Especially for operation with high load and frequency, the maintenance cycle may be shorter. For details on the part selection for replacement and the timing of overhaul, contact your dealer.

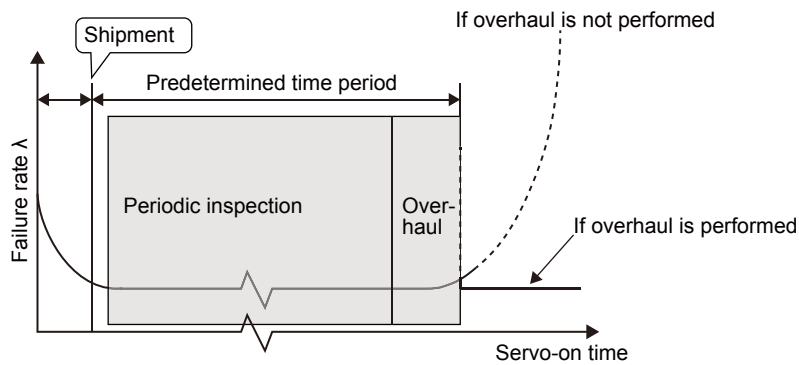

Fig.2-9: Periodic inspection/overhaul periods

2.8 Maintenance parts

A long-term use of industrial robots causes a malfunction due to wear or deterioration of their components, as well as general machines. To prevent such a malfunction and perform smooth operation of the robot for a long term, the regular maintenance, inspection, and replacement of consumable parts are required. Refer to "Maintenance and Inspection" in the separate manual "INSTRUCTION MANUAL/ROBOT ARM SETUP & MAINTENANCE" for details of the maintenance and inspection. The consumable parts used in the robot arm are shown in [Table 2-9](#). Purchase these parts from the designated maker or dealer when required. Some Mitsubishi-designated parts differ from the maker's standard parts. Thus, confirm the part name, robot arm and controller serial No. and purchase the parts from the dealer.

Table 2-9: Consumable part list

No.	Part name	Type ^{Note1)}	Usage place	Qty.	Supplier
1	Grease	-	Reduction gears of each axis	As needed	Mitsubishi Electric

Note1) Confirm the robot arm serial No., and contact the dealer or service branch of Mitsubishi Electric Co., for the type.

3 Controller

3.1 Standard specifications

3.1.1 Basic specifications

Table 3-1: Specifications of controller

Item		Unit	Specification	Remarks
Type			CR800-CVD	Note1)
Number of control axis			Simultaneously 6	Additional 8 axes available.
Memory capacity	Programmed positions	point	39,000	
	No. of steps	step	78,000	
	Number of program		512	
Robot language			MELFA-BASIC V, VI	
Teaching method			Pose teaching method, MDI method Note2)	
External input and output	Input/output	point	32/32	2D-TZ368 (sink type) is attached at the time of shipment. The 2D-TZ378 (source type) is installed from the factory in the S15 with special specifications.
	Dedicated input/output		Assigned with general-purpose input/output	The signal number of "STOP" input signals is fixing.
	Emergency stop input Note3)	point	1 (dual line)	Note4)
	Emergency stop output	point	1 (dual line)

	USB	port	1	Ver. 2.0 HighSpeed device functions only. USB mini-B
	Ethernet	port	1	For customer: 1000BASE-T/ 100BASE-TX/10BASE-T
			1	Dedicated T/B port: 100BASE-TX/ 10BASE-T
	Option slot	slot	2	For option interface 2D-TZ368 is installed to slot 1. The 2D-TZ378 is installed in the S15 with special specifications. Note6)
	SD memory card slot	slot	1	For extended memory
	RS-422	port	1	Dedicated T/B port
Power source	Input voltage range	V	Single phase AC 200 to 230	The rate of power-supply voltage fluctuation is within 10%.
	Power capacity	kVA	2.0	Does not include rush current. Note7)
	Power supply frequency	Hz	50/60	
Outline dimensions Note8)		mm	430(W) x 425(D) x 99.5(H)	Excluding protrusions
Mass		kg	Approx. 12.5	
Construction			Self-contained floor type, Opened type. Installation vertically or horizontally	IP20 Note9)
Ambient temperature	In use	°C	0 to 40	Without freeze
	At transport/storage		-15 to +70	

Item		Unit	Specification	Remarks
Ambient humidity	In use	%RH	45 to 85	Without dew drops
	At transport/storage		90 or less	
Overvoltage category ^{Note10)}			II or less	
Pollution level ^{Note11)}			2 or less	
Altitude		m	1000 or less	
Grounding		Ω	100 or less	100Ω or less (class D grounding) ^{Note12)}
Paint color			Dark gray	Equivalent to Munsell: 3.5PB3.2/0.8, PANTONE: 432C

Note1) For details of the operation procedure, basic operations, and maintenance and inspection items of the controller, refer to the information on the CR800-D in the separate volume "Controller Setup, Basic Operation and Maintenance".

Note2) Pose teaching method: The method to register the current position of the robot arm.

MDI method: The method to register by inputting the numerical value Immediate.

Note3) Only the STO function can meet the requirements of Category 4, Performance Level e. At factory settings, the STO function meets the requirements of Category 3, Performance Level d. To make the STO function meet the requirements of Category 4, Performance Level e, change the parameter setting by referring to [Page 111, "Appendix 3: Safety diagnosis function \(Test pulse diagnosis\)"](#).

Note4) For details on the functions using external input/output signals, always refer to [Page 110, "Appendix 2: Classification of functions using external input/output signals"](#).

Note5) Provide a mode selector switch to change the mode (MANUAL/AUTOMATIC) of the controller. Select the switch that meets the following specifications.

- The switch can be locked in each position of the selected mode.
- The selected switch position can be clearly distinguished from each other.
- Only one mode can be selected at a time.

(Recommended switch model: HA1K-2C2A-2 manufactured by IDEC. The key switch can be locked in each position by removing its key.)

The mode can be changed by other means than the selector switch.

For example, the user can use a mode change program. In the program, provide a means to lock the selected mode with a password.

Note6) Two connectors for 2D-TZ368/2D-TZ378 are attached (FCN-360 BKO-C11465H01).

Note7) The power capacity is the recommended value. The power capacity does not include the rush current when the power is turned ON. The power capacity is a guideline and the actual operation is affected by the input power voltage. Use the short circuit breaker which operates by the current leakage under the commercial frequency domain (50-60Hz). If sensitive to the high frequency ingredient, it will become the cause in which below the maximum leak current value carries out the trip.

The following lists the current values of the representative models as a reference.

Item		Current [A]	Apparent power [kVA]	Voltage at measurement [V]
At control power ON		0.42	0.09	219.3
At servo ON		1.20	0.26	220.0
In automatic operation	Effective value	2.23	0.50	219.2
	Peak	9.19	2.26	220.0

Note8) Refer to [Page 35, "3.3.1 Outside dimensions"](#) for details.

Note9) This controller is standard specification. (Refer to [Page 32, "3.1.2 Protection specifications and operating supply"](#).)

Note10) This indicates the section of the power supply to which the equipment is assumed to be connected between the public electrical power distribution network and the machinery within premises.

Category II applies to equipment for which electrical power is supplied from fixed facilities. The surge voltage withstand level for up to the rated voltage of 300V is 2500V.

Note11) This index indicates the degree to which conductive material is generated in terms of the environment in which the equipment is used.

Pollution level 2 is when only non-conductive pollution occurs. A temporary conductivity caused by condensing must be expected occasionally.

Note12) The robot must be grounded by the customer.

3.1.2 Protection specifications and operating supply

(1) Protection specifications

A protection method complying with the IEC Standard IP20 (Opened type) is adopted for CR800 controller.

The IEC IP symbols refer only to the degree of protection between the solid and the fluids, and don't indicated that any special protection has been constructed for the prevention against oil and water.

[Information]

- The IEC IP20

It indicates the protective structure that prevents an iron ball 12 ± 0.05 mm diameter, which is being pressed with the power of $3.1 \text{ kg} \pm 10\%$, from going through the opening in the outer sheath of the supplied equipment.

(2) Operating supply

The controller is supposed to be installed and used in the customer's system. Supply the primary power of the controller from the system. In addition, provide a safety device (ex. earth-leakage current breaker) that can shut off the power of the controller in the customer's system. When using the earth-leakage current breaker as a safety device, select the product that meets the following specifications.

Item	Unit	Specification
Rated voltage	V	AC200 to 230
Rated sensitivity current	mA	30 or more
Rated current	A	10 or more

Refer to the section [Page 105, "6.2 Working environment"](#) for details on the working environment.

3.2 Names of each part

3.2.1 Controller

Controller front

Controller rear

Fig.3-1: Names of controller parts

<1> ACIN connector.....Supplied ACIN cable connector (input voltage: AC200V).

Number of phase	ACIN cable
Single phase	 <p>Terminal: M5, cable length: 3m</p>

<2> PE terminalTerminals for grounding (M4 screw x 2).

<3> CN1 cableMachine cable connector.

<4> <5> CNUSR connectorRobot I/O cable connectors.

<4>: CNUSR11, <5>: CNUSR12

<6> TB connector.....Dedicated connector for connecting T/B.

<7> LED Four LEDs indicating the controller status.

LED	Details
POWER	Indicates the control power status. On: Control power ON Off: Control power OFF
AUTO	Indicates the controller mode. On: AUTOMATIC mode Off: MANUAL mode
ERROR	Indicates the error status. On: Error occurred. Rapid flashing: High-level error occurred. Off: Normal operation
READY	Indicates the operation status. On: ON (ready) Slow flashing: During operation Rapid flashing: Operation suspended.

<8> HAND FUSE Fuse for the hand.

<9> EXT1 Connector for releasing the brake in an emergency.
For details on the method of releasing the brake in an emergency, refer to the separate manual, "INSTRUCTION MANUAL/ROBOT ARM SETUP & MAINTENANCE".

<10> RIO Parallel I/O extension connector.

<11> OPT1 Unused.

<12> OPT2 Unused.

<13> AXIS Connector for additional axis connection.

<14> PC Connector for communication with a personal computer.

<15> EXT2 Connector for function extension.

<16> LAN Connector for Ethernet communication.

<17> SD CARD SD memory card slot.

<18> Filter cover Dustproof dust filter cover. An air filter is provided inside the filter cover.

<19> <20> Option slot Option card slots (must be covered when not used).
The 2D-TZ368 is attached to SLOT1 at factory shipment. For the S15 specification, the 2D-TZ378 (sink type) is attached. The 2D-TZ378 (source type) is installed in the S15 with special specifications.
<19> SLOT1, <20> SLOT2

<21> FG terminal Option card cable terminals for grounding (M4 screw x 2).

CAUTION

Use the network equipments (personal computer, USB hub, LAN hub, etc) confirmed by manufacturer. The thing unsuitable for the FA environment (related with conformity, temperature or noise) exists in the equipments connected to USB. When using network equipment, measures against the noise, such as measures against EMI and the addition of the ferrite core, may be necessary. Please fully confirm the operation by customer. Guarantee and maintenance of the equipment on the market (usual office automation equipment) cannot be performed.

3.3 Outside dimensions/Installation dimensions

3.3.1 Outside dimensions

Fig.3-2: Outside dimensions of controller

3.3.2 Installation dimensions

The following figures show the dimensions required installing the controller.

For the placement of the controller on its side (the horizontal installation), two stacks is permitted.

Horizontal installation

Vertical installation

Fig.3-3: Installation dimensions

⚠ CAUTION Fixing installation section sure for prevention from the fall, when using the controller placing vertically. The reference figure of the metal plate for fixing is shown in [Fig. 3-4](#).
You should install the metal plate for fixation to the controller with M4 x 8 or the shorter screw. The screw projection length inside the controller (side board thickness is 1.2 mm) surely makes 6.8 mm or less.

⚠ CAUTION When storing the controller in a cabinet, etc., take special care to the heat radiating properties and ventilation properties so that the ambient temperature remains within the specification values. And, don't install the controller in the position where direct rays or the heat of lighting hits. The skin temperature of the controller may rise, and the error may occur.

3.4 External input/output

3.4.1 Types

- (1) Dedicated input/output..... These inputs and outputs carry out the robot remote operation and status display.
- (2) General-purpose input/output..... These are inputs and outputs that the customer can program for peripheral device control.
- (3) Hand input/output These are inputs and outputs related to the hand that the customer can program.
- (4) Emergency stop/Door switch input .. The wiring for the safe security of the emergency stop etc. is shown in on [Page 42, "3.6 Emergency stop input and output etc."](#) and on [Page 100, "6.1.7 Examples of safety measures"](#).

<For Reference>

Linking our GOT2000 Series display equipment to the robot controller over the Ethernet permits you to control robot controller's input/output from a GOT (graphic operation terminal).

3.5 Dedicated input/output

Show the main function of dedicated input/output in the [Table 3-2](#). Refer to attached instruction manual "Detailed explanations of functions and operations" in the product for the other functions. Each parameter indicated with the parameter name is used by designated the signal No., assigned in the order of input signal No. and output signal No.

Table 3-2: Dedicated input/output list

Parameter name	Input Note1)			Output	
	Name	Function	Level	Name	Function
TEACHMD	None			Teaching mode output signal	Outputs that the teaching mode is entered.
ATTOPMD	None			Automatic mode output signal	Outputs that the automatic mode is entered.
ATEXTMD	None			Remote mode output signal	Outputs that the remote mode is entered.
RCREADY	None			Controller power ON complete signal	Outputs that external input signals can be received.
AUTOENA	Automatic operation enabled input signal	Allows automatic operation.	L	Automatic operation enabled output signal	Outputs the automatic operation enabled state.
START	Start input signal	Starts all slots.	E	Operating output signal	Outputs that the slot is operating.
STOP	Stop input signal	Stops all slots. The input signal No. is fixed to 0. Note) Use the emergency stop input for stop inputs related to safety.	L	Wait output signal	Outputs that the slot is temporarily stopped.
STOP2	Stop input signal	The program during operation is stopped. Unlike the STOP parameter, change of the signal number is possible. Notes) Specification is the same as the STOP parameter.	L	Wait output signal	Outputs that the slot is temporarily stopped. Notes) Specification is the same as the STOP parameter.
SLOTINIT	Program reset input signal	Resets the wait state.	E	Program selection enabled output signal	Outputs that the slot is in the program selection enabled state.
ERRRESET	Error reset input signal	Resets the error state.	E	Error occurring output signal	Outputs that an error has occurred.
CYCLE	Cycle stop input signal	Carries out cycle stop.	E	In cycle stop operation output signal	Outputs that the cycle stop is operating.
SRVOFF	Servo ON enabled input signal	Turns the servo OFF for all mechanisms.	L	Servo ON enabled output signal	Outputs servo-on disable status. (Echo back)
SRVON	Servo ON input signal	Turns the servo ON for all mechanisms.	E	In servo ON output signal	Outputs the servo ON state.
IOENA	Operation rights input signal	Requests the operation rights for the external signal control.	L	Operation rights output signal	Outputs the operation rights valid state for the external signal control.
MELOCK	Machine lock input signal	Sets/resets the machine lock state for all mechanisms.	E	In machine lock output signal	Outputs the machine lock state.
SAFEPOS	Evasion point return input signal	Requests the evasion point return operation.	E	In evasion point return output signal	Outputs that the evasion point return is taking place.
OUTRESET	General-purpose output signal reset	Resets the general-purpose output signal.	E	None	
EMGERR	None			Emergency stop output signal	Outputs that an emergency stop has occurred.

Parameter name	Input Note1)			Output	
	Name	Function	Level	Name	Function
S1START : S32START	Start input	Starts each slot.	E	In operation output	Outputs the operating state for each slot.
S1STOP : S32STOP	Stop input	Stops each slot.	L	In wait output	Outputs that each slot is temporarily stopped.
PRGSEL	Program selection input signal	Designates the setting value for the program No. with numeric value input signals.	E	None	
OVRDSEL	Override selection input signal	Designates the setting value for the override with the numeric value input signals.	E	None	
IODATA Note2)	Numeric value input (start No., end No.)	Used to designate the program name, override value., mechanism value.	L	Numeric value output (start No., end No.)	Used to output the program name, override value., mechanism No.
PRGOUT	Program No. output request	Requests output of the program name.	E	Program No. output signal	Outputs that the program name is being output to the numeric value output signal.
LINEOUT	Line No. output request	Requests output of the line No.	E	Line No. output signal	Outputs that the line No. is being output to the numeric value output signal.
OVRDOUT	Override value output request	Requests the override output.	E	Override value output signal	Outputs that the override value is being output to the numeric value output signal.
ERROUT	Error No. output request	Requests the error No. output.	E	Error No. output signal	Outputs that the error No. is being output to the numeric value output signal.
JOGENA	Jog valid input signal	Validates jog operation with the external signals	E	Jog valid output signal	Outputs that the jog operation with external signals is valid.
JOGM	Jog mode input 2-bit	Designates the jog mode.	L	Jog mode output 2-bit	Outputs the current jog mode.
JOG+	Jog feed + side for 8-axes	Requests the + side jog operation.	L	None	
JOG-	Jog feed - side for 8-axes	Requests the - side jog operation.	L	None	
HNDCTRL1 : HNDCTRL3	None			Mechanism 1 hand output signal status : Mechanism 3 hand output signal status	Mechanism 1: Outputs the status of general-purpose outputs 900 to 907. Mechanism 2: Outputs the status of general-purpose outputs 910 to 917. Mechanism 3: Outputs the status of general-purpose outputs 920 to 927.
HNDSTS1 : HNDSTS3	None			Mechanism 1 hand input signal status : Mechanism 3 hand input signal status	Mechanism 1: Outputs the status of hand inputs 900 to 907. Mechanism 2: Outputs the status of hand inputs 910 to 917. Mechanism 3: Outputs the status of hand inputs 920 to 927.
HNDERR1 : HNDERR3	Mechanism 1 hand error input signal : Mechanism 3 hand error input signal	Requests the hand error occurrence.	L	Mechanism 1 hand error output signal : Mechanism 3 hand error output signal	Outputs that a hand error is occurring.

Parameter name	Input Note1)			Output	
	Name	Function	Level	Name	Function
AIRERR1 : AIRERR3	Pneumatic pressure error 1 input signal : Pneumatic pressure error 3 input signal	Request the pneumatic pressure error occurrence.	L	Pneumatic pressure error 1 output signal. : Pneumatic pressure error 3 output signal.	Outputs that a pneumatic pressure error is occurring.
M1PTEXC : M3PTEXC	None		L	Maintenance parts replacement time warning signal	Outputs that the maintenance parts have reached the replacement time.
USERAREA Note3)	None			User-designated area 32-points	Outputs that the robot is in the user-designated area.

Note1) The level indicates the signal level.

L: Level signal → The designated function is validated when the signal is ON, and is invalidated when the signal is OFF.

E: Edge signal → The designated function is validated when the signal changes from the OFF to ON state, and the function maintains the original state even when the signal then turns OFF.

Note2) Four elements are set in the order of input signal start No., end No., output signal start No. and end No.

Note3) Up to eight points can be set successively in order of start output signal No. and end output signal No.

3.6 Emergency stop input and output etc.

Do wiring of the external emergency stop, the special stop input, the door switch, and the mode selector switch from the "special input/output" terminal connector.

Table 3-3: Special input/output terminal

Item	Name	Function
Input	Emergency stop	Applies the emergency stop. Dual line, normal close
Input	Special stop input	Applies the stop. (Refer to Page 46, "3.6.2 Special stop input (SKIP)")
Input	Door switch	Servo-off. Dual line, normal close (Page 47, "3.6.3 Door switch function")
Input	Mode selector switch	Changes the mode (MANUAL/AUTOMATIC) of the controller. Dual line (Page 47, "3.6.4 Mode selector switch function")
Output	Robot error output	Contact is opening during error occurrence.
Output	Emergency stop output	The point of contact opens under occurrence of emergency stop of external input signal, emergency stop of T/B.
Output	Mode output	MANUAL mode: contactor is opening, AUTOMATIC mode: contactor is closing.
Output	Additional axis synchronization output	When an additional axis is used, the servo ON/OFF status of the additional axis can be synchronized with the robot arm. (Page 52, "3.8 Additional axis synchronization output")

*At the time of the power supply OFF, the output point of contact is always open.

[Note] Wire for each input terminal as shown in [Fig. 3-6](#).

The contact capacity of each input/output terminal is DC24V/100mA. Do not connect the equipment except for this range. The use exceeding contact capacity causes failure.
In the customer's system, do not ground the + side of 24V power supply prepared by customer for connect to the controller. (related with emergency stop and parallel input/output) If it connects with the controller under the condition that the + side is grounded, it will lead to failure of controller.

[Note] If a stop signal or servo OFF signal is input simultaneously with a door switch open/emergency stop input, the error, H056n "Servo sys. error (A/D)" may occur.

When a door switch open/emergency stop is input, the robot turns off the servo after it stops. It is unnecessary to input a stop signal or servo OFF signal. To input a stop signal or servo OFF signal with a door switch open/emergency stop input, wait for 100ms or more after a door switch open/emergency stop input.

Pin number assignment of each terminal and the circuit diagram are shown in [Fig. 3-6](#).

3.6.1 Connection of the external emergency stop and mode selector switch

The input terminals for the external emergency stop, door switch, and mode selector switch are arranged as shown in [Fig. 3-6](#). Customers should be sure to prepare the external emergency stop, door switch, and mode selector switch, etc. and use the robot while these are connected. Connection procedures are shown below.

In addition, refer to [Page 100, "6.1.7 Examples of safety measures"](#) for the information on the emergency stop connection and cautions.

[Caution] The emergency stop circuit is duplicated inside the controller. The emergency stop switch uses a double contact-type switch, so please be sure to fix both of the contacts to the connector pins as shown below in order to ensure the wiring is duplicated. An error will continue to occur in the event that only one of the pins is connected.

- 1) Please prepare the emergency stop switch, door switch, and mode selector switch.
- 2) Connect the contacts of each switch to the contacts as shown below:
 - a) External emergency switch
CNUSR11 connector "between 7 and 23" and "between 14 and 30".
 - b) Door switch
CNUSR11 connector "between 6 and 22" and "between 13 and 29".
 - c) Mode selector switch
CNUSR11 connector "between 5 and 21" and "between 12 and 28".

[Caution] Be sure to use a shield cable for the emergency stop wiring cable and dedicated stop input wiring cable. And when operating in an environment that is easily affected by noise, be sure to install the ferrite core (recommended model name: E04SR301334, manufacturer: Seiwa Electric Mfg. Co., Ltd.). Be sure to place the ferrite core in 300mm or less from the connecting terminal section.

⚠ CAUTION Make sure there are no mistakes in the wiring. Connecting differently to the way specified in the manual can result in errors, such as the emergency stop not being released. In order to prevent errors occurring, please be sure to check that all functions (such as the teaching box emergency stop, customer emergency stop, and door switch) are working properly after the wiring setup is completed.

⚠ CAUTION You should always connect doubly connection of the emergency stop, the door switch, and the mode selector switch. In connection of only one side, if the relay of customer use should break down, it may not function correctly. And, the output contacts from the robot controller (robot error output, emergency stop output, mode output, additional axis synchronization output) are dual contacts (synchronizes). You should connect surely by dual line with the customer's equipment as well as connection of the emergency stop and the door switch.

⚠ CAUTION Please make sure to wire the multiple emergency stop switches so that they each function independently. Check and make sure that the emergency stop doesn't only function under an AND condition (when multiple emergency stop switches are ON at the same time).

Fig.3-5: Emergency stop cable and mode selector switch connection

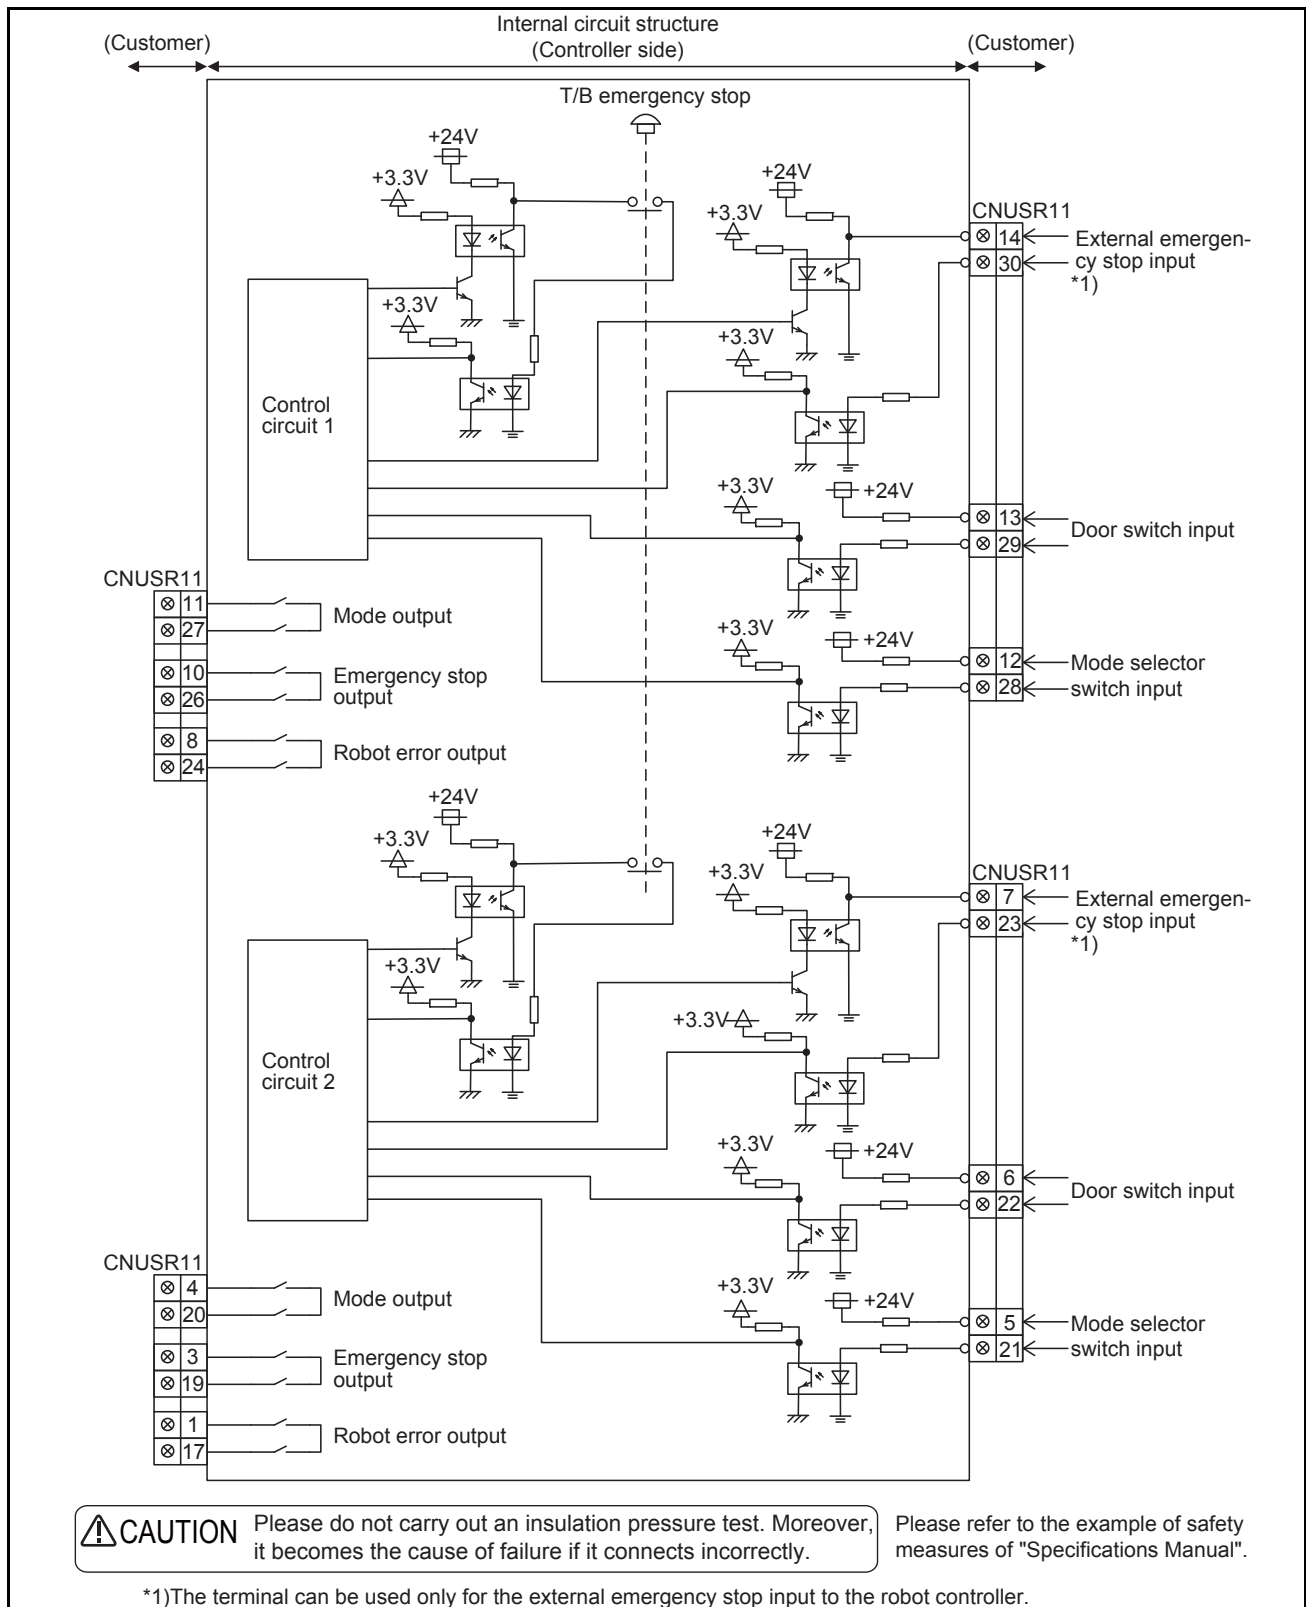

Fig.3-6: External emergency stop connection

CAUTION Place the emergency stop switch in an easily operable position, and be sure to wire it to the emergency stop correctly by referencing [Page 100, "6.1.7 Examples of safety measures"](#). This is a necessary measure in order to ensure safe operation so that the robot can be stopped immediately by pressing the emergency stop switch in the event that the robot malfunctions.

Fig.3-7: Wiring method to the user wiring connector

⚠ CAUTION Fully check the number of the cable insertion hole (connector pin number) for incorrect connection. Incorrect wiring may damage the robot or cause a malfunction.

⚠ CAUTION When wiring to the CNUSR11/CNUSR12 connector, pay attention to fraying wires of the core wires. The fraying wires can come into contact with the adjacent terminal, causing a short circuit.
Do not apply solder on core wires. Doing so may cause a contact failure.

3.6.2 Special stop input (SKIP)

The SKIP is the input signal to stop the robot. Please connect the pin 4, 13 of the CNUSR12 connector shown in [Fig. 3-8](#).

Table 3-4: Special stop input electric specification

Item		Specifications	Internal circuit
Type		DC input	
No. of input point		1	
Insulation method		Photo-coupler insulation	
Rated input voltage		DC24V	
Rated input current		Approx. 11mA	
Working voltage range		DC 21.6 to 26.4V (Ripple rate within 5%)	
ON voltage/ON current		DC 8V or more / 2mA or more	
OFF voltage/OFF current		DC 4V or less / 1mA or less	
Input resistance		Approx. 2.2kΩ	
Response time	OFF→ON	1ms or less	
	ON→OFF	1ms or less	
Common method		1 point per common	
External wire connection method		Connector	

* Refer to [Page 45 "Fig. 3-7: Wiring method to the user wiring connector"](#) for more details about how to wire a connector.

Note) In the customer's system, do not ground the + side of 24V power supply prepared by customer for connect to the controller. (related with emergency stop and parallel input/output) If it connects with the controller under the condition that the + side is grounded, it will lead to failure of controller.

Fig.3-8: Connection of the special-stop-input

3.6.3 Door switch function

This function acquires the status of the switches attached on the door of the safety fence, and it turns OFF the servo to stop the robot when the door is opened.

Follow the wiring example shown in [Page 44 "Fig. 3-6: External emergency stop connection"](#) and [Page 100, "6.1.7 Examples of safety measures"](#). Details of this function according to the robot status are shown below (Fig. 3-9).

- *During automatic operationWhen the door is opened, the servo turns OFF and the robot stops. An error occurs. The process of the restoration: Close the door, reset the alarm, turn on the servo, and restart.
- *During teachingEven when the door is opened, using a selector switch allows to turn the servo ON with the teaching pendant to operate the robot.

Fig.3-9: Door switch function

3.6.4 Mode selector switch function

The mode selector switch switches the mode of the controller between MANUAL mode and AUTOMATIC mode.

Table 3-5: States of input terminal

Mode of controller	Input terminal
MANUAL (Teaching)	Open
AUTOMATIC (Automatic operation)	Close

(1) Automatic Operation/Jog Operation/Brake Release and Necessary Switch Settings

The following is a description of various operations performed on the robot and switch settings that are required.

Table 3-6: Various operations and necessary switch settings

No	Operation	Related switch settings ^{Note1)}				Description
		T/B enable/disable	T/B enable switch	Mode selector switch input terminal	Door switch input terminal	
1	Jog operation	Enable	ON	Open (MANUAL mode)	-	If the mode selector switch input is set to Open (MANUAL mode), the state of door switch input does not matter.
2	Brake release ^{Note2)}	Enable	ON	Open (MANUAL mode)	-	If the mode selector switch input is set to Open (MANUAL mode), the state of door switch input does not matter.
3	Automatic operation	Disable	-	Close (AUTOMATIC mode)	Close (Door Close)	Door switch input must always be in a state of Close (Door Close).

Note1) "-" in the table indicates that the state of switch concerned does not matter.

Refer to the following for operation of each switch.

- T/B enable/disable: [Page 55, "\(1\) Teaching pendant \(T/B\)"](#)
- T/B enable switch: [Page 55, "\(1\) Teaching pendant \(T/B\)"](#)
- Mode selector switch input terminal: [Page 100, "6.1.7 Examples of safety measures"](#)
- Door switch input terminal: [Page 100, "6.1.7 Examples of safety measures"](#)

Note2) T/B is used for the brake release operation. Brake release can be effected only when the T/B enable switch is placed in intermediate position (lightly gripped position). At this point, the state of door switch input does not matter.

⚠ CAUTION

Upon the release of brake, the robot arm may fall under its own weight depending on the axis which has been released. To ensure safety, take appropriate measures such as supporting the axis to avoid the free fall.

Fig.3-10: Brake release operation

3.7 Additional Axis Function

This controller is equipped with an additional axis interface for controlling an additional axis when a traveling axis or rotary table is added to the robot. A maximum of eight axes of servo motors can be controlled at the same time by connecting a general-purpose servo amplifier (MR-J4-B series) that supports Mitsubishi's SSCNET III.

Refer to the separate "Additional axis interface Instruction Manual" for details on the additional axis function.

3.7.1 Wiring of the Additional Axis Interface

Table 3-7 shows the connectors for additional axes inside the controller.

Fig. 3-11 shows a connection example (configuration example).

Table 3-7: Dedicated connectors inside the controller

Name	Connector name	Details
Connector for additional axes	AXIS	The connector for connecting the general-purpose servo amplifier.

* It cannot communicate, if connection of CN1A and CN1B is mistaken.

Fig.3-11: Example of addition axis connection

3.7.2 Example of the installation of the noise filter

■ EMC filter (recommended)

Please install the recommendation filter shown below according to the example of connection.

Table 3-8: Combination of a servo amplifier and filter (Soshin Electric)

Servo amplifier	Recommended filter (Soshin Electric)				Mass [kg]
	Model	Rated current [A]	Rated voltage [VAC]	Leakage current [mA]	
MR-J4-10B(-RJ) to MR-J4-100B(-RJ)	HF3010A-UN ^{Note1)}	10	250	5	3.5
MR-J4-200B(-RJ) MR-J4-350B(-RJ)	HF3030A-UN ^{Note1)}	30			5.5
MR-J4-500B(-RJ) MR-J4-700B(-RJ)	HF3040A-UN ^{Note1)}	40		6.5	6
MR-J4-11KB(-RJ) MR-J4-15KB(-RJ) MR-J4-22KB(-RJ)	HF3100A-UN ^{Note1)}	100			12
MR-J4-60B4(-RJ) MR-J4-100B4(-RJ)	TF3005C-TX	5	500	5.5	6
MR-J4-200B4(-RJ) MR-J4-700B4(-RJ)	TF3020C-TX	20			
MR-J4-11KB4(-RJ)	TF3030C-TX	30			7.5
MR-J4-15KB4(-RJ)	TF3040C-TX	40			12.5
MR-J4-22KB4(-RJ)	TF3060C-TX	60			
MR-J4-10B1(-RJ) to MR-J4-40B1(-RJ)	TF3010A-UN ^{Note1)}	10	250	5	3.5

Note1) Following surge protector is separately required to use any of these EMC filters.

RSPD-250-U4 (Manufacture: OKAYA Electric Industries CO., Ltd.)

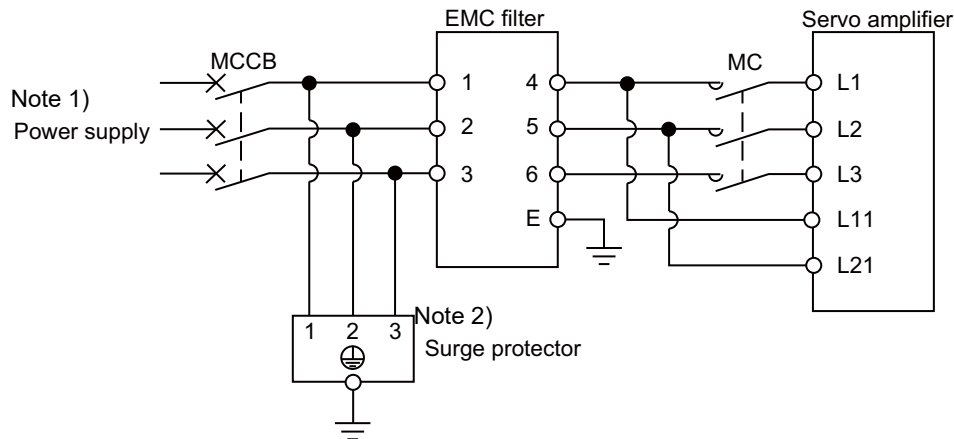

Table 3-9: Combination of a servo amplifier and filter (COSEL)

Servo amplifier	Recommended filter (COSEL)				Mass [kg]
	Model	Rated current [A]	Rated voltage [VAC]	Leakage current [mA]	
MR-J4-11KB(-RJ) to MR-J4-22KB(-RJ)	FTB-100-355-L ^{Note1)}	100	500	40	5.3
MR-J4-22KB4(-RJ)	FTB-80-355-L ^{Note1)}	80	500	80	5.3

Note1) Following surge protector is separately required to use any of these EMC filters.

RSPD-500-U4 (Manufacture: OKAYA Electric Industries CO., Ltd.)

■ Installing an EMC noise filter

Note 1) For 1-phase 200V to 230VAC power supply, connect the power supply to L1, L2 and leave L3 open.

There is no L3 for 1-phase 100 to 120 VAC power supply.

Note 2) The example is when a surge protector is connected.

Fig.3-12: Example of EMC noise filter installation

(1) Line noise filter

This filter is effective in suppressing noises radiated from the power supply side and output side of the servo amplifier and also in suppressing high-frequency leakage current (zero-phase current) especially within 0.5MHz to 5MHz band.

Connection diagram	Outline drawing [Unit: mm]
<p>Use the line noise filters for wires of the main power supply ($L_1 \cdot L_2 \cdot L_3$) and of the motor power supply ($U \cdot V \cdot W$). Pass each of the 3-phase wires through the line noise filter an equal number of times in the same direction. For the main power supply, the effect of the filter rises as the number of passes increases, but generally four passes would be appropriate. For the motor power supply, passes must be four times or less. Do not pass the grounding (earth) wire through the filter, or the effect of the filter will drop. Wind the wires by passing through the filter to satisfy the required number of passes as shown in Example 1. If the wires are too thick to wind, use two or more filters to have the required number of passes as shown in Example 2. Place the line noise filters as close to the servo amplifier as possible for their best performance.</p> <p>Example 1</p> <p>(Number of turns: 4)</p> <p>Example 2</p> <p>Two filters are used (Total number of turns: 4)</p>	<p>FR-BSF01 (for wire size 3.5mm² (AWG12) or less))</p> <p>FR-BLF (for wire size 5.5mm² (AWG10) or more))</p>

Fig.3-13: Example of noise filter installation

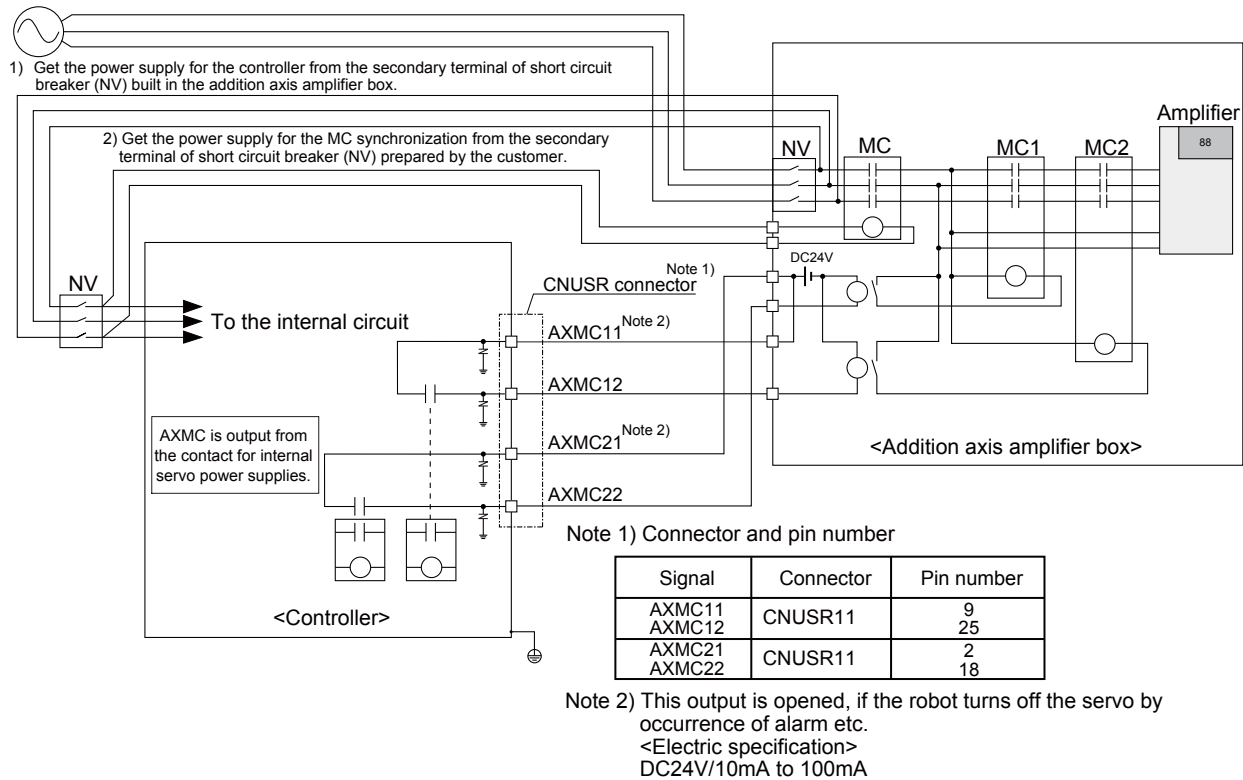

3.8 Additional axis synchronization output

When an additional axis is used, the servo ON/OFF status of the additional axis can be synchronized with the servo ON/OFF status of the robot itself by using the output contact (AXMC) provided on the rear or inside of the controller and configuring a circuit so that the power to the servo amplifier for the additional axis can be turned off when this output is open.

An example circuit is shown in Page 52, "(1) Example circuit". An image of how to connect the connector is shown in Page 53, "(2) Image of how to connect the controller connector". When you are using an additional axis, please perform appropriate circuit connections by referring to these drawings. Refer to Page 49, "3.7 Additional Axis Function" and the separate "Additional axis interface Instruction Manual" for details on the additional axis function.

Note1) you use the addition axis function as a user mechanism who became independent of the robot arm, please do not connect this output signal. Servo-on of the user mechanism may be unable.

(1) Example circuit

[Note] For the input/output cable (CNUSR connector cable) that connects customer's system and the controller, prevent ground faults from occurring at the + side of the 24V power supply prepared by customer. A ground fault may lead to a failure of the protection device in the controller. Bending or frictional forces may be applied to the input/output cable repeatedly depending on the system configuration or layout. In this case, use a flexible cable for the input/output cable. Note that a fixed cable may be broken, resulting in a ground fault.

Fig.3-14: Example of circuit for additional axis synchronization output

(2) Image of how to connect the controller connector

* Refer to [Page 45 "Fig. 3-7: Wiring method to the user wiring connector"](#) for more details about how to wire a connector.

Fig.3-15: AXMC terminal connector

3.9 Options

- What are options?

There are a variety of options for the robot designed to make the setting up process easier for user needs.
User installation is required for the options.

(1) Teaching pendant (T/B)

- Order type: ● R32TB : Cable length 7m
 ● R32TB-15 : Cable length 15m

■ Outline

This is used to create, edit and control the program, teach the operation position and for jog feed, etc. For safety proposes, a 3-position enable switch is mounted. *1)

For multiple robots, you can operate them with just one teaching pendant by repeating the removal of it from another robot and the connection of it to the target robot.

■ Configuration

Table 3-10: Configuration device

Part name	Type	Qty.	Mass (kg) ^{Note1)}	Remarks
Teaching pendant	R32TB	Either one pc.	1.7	Cable length is 7m.
	R32TB-15		2.8	Cable length is 15m.

Note1) Mass indicates one set.

■ Specifications

Table 3-11: Specifications

Items	Specifications	Remarks
Outline dimensions	195(W) x 292(H) x 106(D) (refer to outline drawing)	
Body color	Dark gray	
Mass	Approx. 0.9kg (body only, excluding cables)	
Connection method	Connects with controller via connector.	
Interface	RS-422	
Display method	LCD method: 24 characters x 8 lines, LCD illumination: with backlight	At 8x8 font
Operation section	36 keys	

*1) <3-position enable switch>

In ISO/10218 (1992) and JIS-B8433 (1993), this is defined as an "enable device". These standards specify that the robot operation using the teaching pendant is enabled only when the "enable device" is at a specified position.

With the Mitsubishi Electric industrial robot, the above "enable device" is configured of an "Enable/Disable switch" and "Enable switch".

The 3-position enable switch has three statuses. The following modes are entered according to the switch state.

- a) "Not pressed" The robot does not operate. *)
- b) "Pressed lightly" The robot can be operated and teaching is possible.
- c) "Pressed with force" The robot does not operate. *)

*) Operations, such as program editing and status display, other than robot operation are possible.

Safety is secured as the servo power is turned OFF simultaneously with the input of the emergency stop.

Fig.3-16: Outside dimensions of teaching pendant

■ Installation method

The teaching pendant is connected to the TB connector on the front of the controller.

■ Key layout and main functions

Fig.3-17: Teaching pendant key layout and main functions

(2) High efficient teaching pendant (T/B)

- Order type: ●R56TB :Cable length 7m
 ●R56TB-15 :Cable length 15m

■Outline

This is used to create, edit and control the program, to teach the operation position, or to perform jog feed, etc. This highly efficient teaching pendant has a touchscreen graphical user interface (GUI) which allows easy operation. In addition, the 3-position enable switch ^{*1)} is provided for the safety use.

For multiple robots, you can operate them with just one teaching pendant by repeating the removal of it from another robot and the connection of it to the target robot.

■Configuration

Table 3-12: Configuration device

Part name	Type	Qty.	Mass (kg) ^{Note1)}	Remarks
High efficient teaching pendant	R56TB	Either one pc.	2.1	Cable length is 7m.
	R56TB-15		3.2	Cable length is 15m.

Note1) Mass indicates one set.

■Specifications

Table 3-13: Specifications

Items	Specifications	Remarks
Outline dimensions	252(W) x 240(H) x 114(D) (refer to outline drawing)	
Body color	Dark gray	
Mass	Approx. 1.25kg (body only, excluding cables)	
Connection method	Connects with controller via connector.	
Interface	RS-422, Ethernet (10BASE-T)	For connection with robot controller
	USB host	Note1)
Display	6.5" TFT (640 x 480) color touchscreen, with backlight	

Note1) The operation of the following USB memory sticks has been confirmed.

- a) Kingston Data TravelerManufacture: Kingston, Type: USB 2.0 memory stick,
 Memory sizes: 128 MB - 1GB
 b) Transcend Jet FlashManufacture: Transcend, Type: USB 2.0 memory stick,
 Memory sizes: 128 MB - 1GB

Notice) The operation of those other than the above is not guaranteed.

■Installation method

The teaching pendant is connected to the TB connector on the front of the controller.

*1) <3-position enable switch>

In ISO/10218 (2006) and JIS-B8433 (1993), this is defined as an "enable device". These standards specify that the robot operation using the teaching pendant is enabled only when the "enable device" is at a specified position.

With the Mitsubishi Electric industrial robot, the above "enable device" is configured of an "Enable/Disable switch" and "Enable switch".

The 3-position enable switch has three statuses. The following modes are entered according to the switch state.

- a) "Not pressed" The robot does not operate.
 b) "Pressed lightly" The robot can be operated and teaching is possible.
 c) "Pressed with force" The robot does not operate.

*) Operations, such as program editing and status display, other than robot operation are possible.

Safety is secured as the servo power is turned OFF simultaneously with the input of the emergency stop.

■ Outside dimensions and main functions

- | | |
|---|---|
| 1) TEACH button | This changeover switch is used to enable or disable the T/B key operations. The lamp (white) lights up during enabling state. |
| 2) Wheel | Move the cursor to select the menu and so on. |
| 3) Emergency stop button | This stops the robot in an emergency state. The servo turns OFF. Turn to the right to cancel. |
| 4) Touch stylus (Integrated in housing) | The pen which operates the touch panel. |
| 5) Power supply LED, T/B enable LED | POWER LED lights up during supplying the power supply. TB ENABLE LED lights up during enabling state. |
| 6) Touch panel | Tap to operate with the stylus pen and the screen is displayed. |
| 7) USB connector | Plug-in the USB memory stick. |
| 8) STOP button | This stops the robot immediately. The servo does not turn OFF. |
| 9) SERVO button | This turns ON the servo power simultaneously with the enable switch. The LED (green) lights during servo ON. |
| 10) RESET button | This key resets an error state that has occurred. |
| 11) CAUTION button | If this button is pushed in jog operation, the limit switch can be canceled. Moreover, push this button, when releasing the brake. |
| 12) HOME button | Not use. |
| 13) OVRD button | This scrolls override up or down. |
| 14) HAND button | Display the screen of hand operation. |
| 15) JOG button | Display the screen of jog operation. |
| 16) +/- button | This button operates corresponding to the selected operation. |
| 17) EXE button | Move the robot, such as hand alignment. |
| 18) MENU button | Display the menu screen. |
| 19) RETURN button | Close each operation screen. |
| 20) Arrow button | Move the cursor |
| 21) OK button | Fix each screen operation. |
| 22) CANCEL button | Cancel each screen operation. |
| 23) Multi grip handle | Holds the T/B. |
| 24) Enable switch | If this switch is released or pressed with force while the T/B is enabled, the servo power supply turns OFF. To move the robot in jog operation or the like, press the switch lightly and hold it. The enable switch is mounted on each of the multi grip handle. |

Fig.3-18: Teaching pendant outside dimensions and main functions

(3) Controller protection box

■Order type: CR800-MB

■Outline

Storing the controller in this box protects the controller from dust and water. Use this option, when the controller is installed where environment is oil mist such as machine shop etc.

■Configuration

Table 3-14: Configuration equipment and types

Part name	Type	Qty.	Mass (Kg) ^{Note1)}	Remarks
Controller protection box	CR800-MB	1	21	-
Label for serial number	-	1		-
Transparent seal	-	1		-
Cable tie	T50L	4		-
Screw for fixing of the controller mounting plate	M4x8	4		-
Instruction Manual	BFP-A3501	1	-	-

Note1) Mass indicates one set.

■Specifications

Table 3-15: Specifications

Item	Unit	Specifications	Remarks
Outside dimension	mm	500(W)×725(D)×250(H)	Protrusions such as rubber legs are excluded.
Mass	kg	21	-
Construction	-	IP54 ^{Note1)}	Self-contained floor type
Grounding	-	100 or less (class D grounding)	-
Paint color	-	Dark gray	Equivalent to Munsell: 3.5PB3.2/0.8, PANTONE: 432C

Note1) In the environment where oil, such as machining oil, drops on the controller protection box, provide a shield plate to protect the controller protection box from the oil droplets.

(1) The robot must be grounded by the customer.

(2) The customer needs to prepare the power cable for protection box fan and the grounding cable.

(Power supply voltage for fan: 200 VAC, Screw size for power supply connection terminal block: M4)

(4) MELSOFT RT ToolBox3/MELSOFT RT ToolBox3 mini/MELSOFT RT ToolBox3 Pro

- Order type:
- MELSOFT RT ToolBox3
*For windows DVD-ROM : 3F-14C-WINE
 - MELSOFT RT ToolBox3 mini
*For windows DVD-ROM : 3F-15C-WINE
 - MELSOFT RT ToolBox3 Pro
*For windows DVD-ROM : 3F-16D-WINE

■ Outline

This is handy software that fully uses the personal computer functions. It can be used in various stages from the robot specifications study (tact study, etc.) to the design support (creation and editing of programs), start up support (execution, control and debugging of program), and maintenance ^{*1)}.

■ Configuration

Table 3-16: Product configuration

Part name	Type	Medium	Mass (kg) ^{Note1)}	Remarks
RT ToolBox3	3F-14C-WINE	DVD-ROM	0.2	
RT ToolBox3 mini	3F-15C-WINE	DVD-ROM	0.2	
RT ToolBox3 Pro	3F-16D-WINE	DVD-ROM	0.2	

Note1) Mass indicates one set.

■ Features

(1) Simple operation with guidance method and menu method

The Windows standard is used for windows operation, so the controller initialization and startup operations can be carried out easily by following the instructions given on the screen. Even a beginner can easily carry out the series of operations from program creation to execution.

(2) Increased work efficiency with ample support functions

The work efficiency is greatly improved with the multi-window method that carries out multiple steps and displays in parallel. The renumbering function, and copy, search, syntax check and step execution are especially sufficient, and are extremely useful when editing or debugging the program.

With the simulation function support of MELSOFT RT ToolBox3, the program can be debugged and the tact checked before starting the machine at the site. This allows the on-site startup work efficiently to be greatly improved.

MELSOFT RT ToolBox3 Pro allows a simulation of robot operation on three-dimensional CAD software SolidWorks®.

(3) The position recovery support function increases the recovery efficiency in the event of origin position displacement. This function compensates the origin settings and position data by just reproducing several previous teaching points when hand and/or arm displacement occurs, when replacing the motor and the belts, or when reloading the robot. This function can reduce the time required for recovery.

*1) The maintenance forecast function cannot be used with the RV-8CRL.

■ Functions

Table 3-17: Functions

Function		Functional existence ^{Note1)}			Details
Compatible model		○	○	○	Personal computer running Windows XP, Windows Vista, Windows 7, Windows 8, Windows 8.1, or Windows 10. ^{Note2)}
Program editing functions	Editing functions	○	○	○	<ul style="list-style-type: none"> • MELFA BASIC V, VI language compatible • Multiple editing screen simultaneously display • Command input, comment writing • Position data editing • File operation (writing to controller, personal computer) • Search and replace function (using characters, line Nos., labels) • Copy, cut, paste, insert (per character, line), undo (per command statement, position conversion) • Line No. automatic generation, renumbering • Batch syntax check • Command template • Position conversion batch editing • Position variable template • Print, print preview
	Control functions	○	○	○	<ul style="list-style-type: none"> • Program file control (list, copy, movement, delete, content comparison, name change, protect)
	Debugging functions	○	○	○	<ul style="list-style-type: none"> • Direct editing of program in controller • Confirmation of robot program operation (step execution, direct execution)
Simulation function		○	○	×	<ul style="list-style-type: none"> • Off-line simulation of robot program operation using CG (computer graphics) • Tact time calculation
Monitor functions		○	○	○	<ul style="list-style-type: none"> • Robot operation monitor (robot operation state, stop signal, error monitor, program monitor (execution program, variables), general-purpose input/output signals (forced output possible), dedicated input/output signals, operation confirmation (operation range, current position, hand, etc.) • Operation monitor (working time statistics, production information, robot version) • Servo monitor (load)
Maintenance function		○	○	○	<ul style="list-style-type: none"> • Parameter setting • Batch, divided backup
Simulation function on SolidWorks.		○	×	×	<ul style="list-style-type: none"> • Off-line simulation of robot program operation using CG (computer graphics) • Tact time calculation • Complex motion path generation, etc.

_____ MELSOFT RT ToolBox3 (3F-14C-WINE)

_____ MELSOFT RT ToolBox3 Pro (3F-16D-WINE)

Note1) The functions included with the MELSOFT RT ToolBox3 ,MELSOFT RT ToolBox3 mini, and the MELSOFT RT ToolBox3 Pro are shown below. ○: Function provided ×: Function not provided

Note2) Recommend corresponding to CE Marking, an FCC standard, and a VCCI standard.

(5) Instruction Manual (bookbinding)

■Order type: • 5F-BR01-PE01: Instruction manuals of RV-8CRL

■Outline

This is a printed version of the CD-ROM (instruction manual) supplied with this product.

■Configuration

Table 3-18: Product configuration

Name	Type	Mass (Kg) ^{Note1)}	Specifications
Instruction Manual	5F-BR01-PE01	3.0	The instructions manual set of RV-8CRL.
Safety Manual	BFP-A3541	-	Items relating to safety in handling the robot
Standard Specifications	BFP-A3678	-	Specification of the robot arm and controller
Robot Arm Setup & Maintenance	BFP-A3679	-	Installation method of the robot arm, jog operation, and maintenance and inspection procedures
Controller Setup, Basic Operation and Maintenance	BFP-A3476	-	Installation method of the controller, basic operation, and maintenance and inspection procedures
Detailed Explanation of Functions and Operations	BFP-A3478	-	Functions of the controller and T/B, operation method, and explanation of MELFA-BASIC VI.
Troubleshooting	BFP-A3480	-	Causes of errors occurred and their countermeasures
Additional axis function	BFP-A3504	-	Function of the additional axis, operation method.
Tracking Function	BFP-A3520	-	Function of the tracking, operation method.
GOT Direct Connection Extended Function	BFP-A3546	-	Explains of data configuration of shared memory, monitoring, and operating procedures, between the GOT and controller.
Ethernet Function	BFP-A3379	-	Ethernet communication method between personal computer and robot controller.

Note1) Mass indicates one set.

(6) Parallel I/O interface

■Order type : ●2D-TZ368 (Sink type)/2D-TZ378 (Source type)

■Outline

This is used to expand the external inputs and outputs.

- The connecting cable with external equipment is not attached. Since we are preparing the external input-and-output cable (2D-CBL05 or 2D-CBL15) as the option, please use.

Notes) Although the combined use with the parallel input-and-output unit (2A-RZ361/ 2A-RZ371) of another option is also possible, please use the setup of the station number by the different number separately. The station number is automatically determined by the position of the option slot which installed this interface. (station number 0 to 1)

■Configuration

Table 3-19: Configuration device

Part name	Type	Qty.	Mass (kg) ^{Note1)}	Remarks
Parallel I/O interface	2D-TZ368	Either one pc.	0.4	Input/output 32 points/32 points 2D-TZ368 is sink type. 2D-TZ378 is source type.
	2D-TZ378			

Note1) Mass indicates one set.

■Specifications

Table 3-20: Electrical specifications of input circuits

Item		Specification	Internal circuit
Type		DC input	<div><Sink type></div>  <div><Source type></div> 
Number of input points		32	
Insulation method		Photo coupler insulation	
Rated input voltage		DC12V DC24V	
Rated input current		Approx. 3mA Approx.9mA	
Working voltage range		DC10.2 to 26.4V (Ripple factor should be less than 5%)	
ON voltage/ON current		DC8V or more/2mA or more	
OFF voltage/ OFF current		DC4V or less/1mA or less	
Input resistance		Approx. 2.7kΩ	
Response time	OFF-ON	10ms or less(DC24V)	
	ON-OFF	10ms or less(DC24V)	
Common method		32 points per common	
External cable connection method		Connector	

Table 3-21: Electrical specifications for the output circuits

Item		Specification	Internal circuit
Type		Transistor output	<p><Sink type></p>  <p><Source type></p> 
No. of output points		32	
Insulation method		Photo-coupler insulation	
Rated load voltage		DC12V/DC24V	
Rated load voltage range		DC10.2 to 30V (peak voltage DC30V)	
Max. load current		0.1A/point (100%)	
Leakage current at OFF		Within 0.1mA	
Max. voltage drop at ON		DC0.9V(TYP.) ^{Note1)}	
Response time	OFF-ON	10ms or less (Resistance load) (hardware response time)	
	ON-OFF	10ms or less (Resistance load) (hardware response time)	
Fuse rating		Fuse 1.6A (one per common) Replacement possible (max. 3)	
Common method		16 points per common (common terminal: 2points)	
External wire connection method		Connector	
External power supply	Voltage	DC12/24V(DC10.2 to 30V)	
	Current	60mA (TYP.DC24V per common) (base drive current)	

Note1) The maximum voltage drop value at signal ON.

Refer to it for the equipment connected to the output circuit.

⚠ CAUTION

The protection fuse of the output circuit prevents the failure at the time of the load short circuit and incorrect connection. The load connected of the customer should be careful not to exceed maximum rating current. The internal transistor may be damaged if maximum rating current is exceeded.

■ Installation method

The expansion parallel input/output interface is installed in the controller. Refer to separate "Instruction Manual/ Controller setup, basic operation, and maintenance" for details on the installing method.

If it installs in the option SLOT of the controller, the station number will be assigned automatically.

SLOT1: station number 0 (0 to 31)

SLOT2: station number 1 (32 to 63)

⚠ CAUTION

If it uses together with parallel input-and-output unit 2A-RZ361/2A-RZ371, please do not overlap with the station number of the parallel input-and-output interface.

Fig.3-23: Parallel I/O interface installation position

■ Pin layout of connector

Fig.3-24: Pin layout of connector

■ Connector pin No. and signal assignment

The station number is fixed by the slot to install and the allocation range of the general-purpose input-and-output signal is fixed.

Table 3-22: The slot number and the station number

Slot number	Station number	Range of the general-purpose input-and-output signal	
		Connector <1>	Connector <2>
SLOT1	0	Input: 0 to 15 Output: 0 to 15	Input: 16 to 31 Output: 16 to 31
SLOT2	1	Input: 32 to 47 Output: 32 to 47	Input: 48 to 63 Output: 48 to 63

The connector pin number of the parallel input-and-output interface installed in SLOT1 and signal number allocation are shown in [Table 3-23](#) and [Table 3-24](#). If it installs in other slots, please interpret and utilize.

Table 3-23: Connector<1> pin assignment list and external I/O cable (2D-CBL**) color(SLOT1)

(7) External I/O cable

■Order type : ●2D-CBL□□[Note]The numbers in the boxes□□ refer to the length. (05: 5m, 15: 15m)

■Outline

This is the dedicated cable used to connect an external peripheral device to the connector on the parallel I/O interface. For parallel I/O unit is another option 2A-CBL□□.

One end matches the connector on the parallel input/output unit, and the other end is free. Connect the peripheral device's input/output signal using the free end. One cable correspond to the input 16 points and output 16 points.

Two cables are needed to connection of (input 32 points and output 32 points) with built-in standard.

■Configuration

Table 3-25: Configuration device

Part name	Type	Qty.	Mass (kg) ^{Note1)}	Remarks
External I/O cable	2D-CBL□□	1 pc.	0.7(5m) 1.84(15m)	5m or 15m

Note1) Mass indicates one set.

9A/C	Yellow/Red b	19A/C	Yellow/Red d	9B/D	Yellow/Black b	19B/D	Yellow/Black d
10A/C	Pink/Red b	20A/C	Pink/Red d	10B/D	Pink/Black b	20B/D	Pink/Black d

Notes) Pin number of connector<1> are 1C, 2C,20C, 1D, 2D,20D, connector<2> are 1A, 2A,20A, 1B, 2B,20B.

■Connections and outside dimensions

The sheath of each signal cable (40 lines) is color indicated and marked with dots. Refer to the cable color specifications in "Table 3-36: Connector pin numbers and cable colors" when making the connections.

Fig.3-27: Connections and outside dimensions

(8) Parallel I/O unit

■Order type: 2A-RZ361(Sink type)/2A-RZ371(Source type)

■Outline

This is used to expand the external inputs and outputs.

- The connection cable is not included. .Prepare the optional external input/output cable (2A-CBL05 or 2A-CBL15).
- Use 2A-RZ361 if the external input/output signal logic is of the sink type and 2A-RZ371 for source type signal logic.

Notes) Although the combined use with the parallel I/O interface (2D-TZ368/2D-TZ378) of another option is also possible, please use the setup of the station number by the different number separately. The station number is automatically fixed by the position of the option slot which installed the parallel I/O interface in 0-1.

■Configuration

Table 3-28: Configuration device

Part name	Type	Qty.	Mass (kg) ^{Note1)}	Remarks
Parallel I/O unit	2A-RZ361	Either one pc.	0.7	Input/output 32 points/32 points 2A-RZ361 is the sink type. 2A-RZ371 is the source type.
	2A-RZ371			
Robot I/O link connection connector	NETcable-1	2 sets	-	Connector with pins. The cable must be prepared and wired by the customer.
Power connection connector	DCcable-2	Each 1 set	-	Connector with pins. The cable must be prepared and wired by the customer.
Terminator	R-TM	1 pc.	-	100Ω (1/4W)

Note1) Mass indicates one set.

■Specifications

- 1) Up to eight stations can be connected to this unit (one station occupies one unit).
The combined use with another optional parallel I/O interface (2D-TZ368/2D-TZ378) is possible, but the maximum number of stations is eight in total. In this case, set any of station numbers carefully so that they do not duplicate.
- 2) The power supply (24V) must be prepared by the customer and connected with the power connection cable (DCcable-2)
A separate 24V power supply is required for the input/output circuit wiring.

Table 3-29: Electrical specifications of input circuits

Item		Specification	Internal circuit
Type		DC input	<div><Sink type></div>  <div><Source type></div> 
Number of input points		32	
Insulation method		Photo coupler insulation	
Rated input voltage		12VDC 24VDC	
Rated input current		Approx 3mA Approx 7mA	
Working voltage range		10.2 to 26.4VDC (Ripple factor should be less than 5%.)	
ON voltage/ON current		8VDC or more/ 2mA or more	
OFF voltage/ OFF current		4VDC or less/ 1mA or less	
Input resistance		Approx. 3.3kΩ	
Response time	OFF-ON	10ms or less (24VDC)	
	ON-OFF	10ms or less (24VDC)	
Common method		8 points per common	
External cable connection method		Connector	

Table 3-30: Electrical specifications for the output circuits

Item		Specification	Internal circuit
Type		Transistor output	<div><Sink type></div>  <div><Source type></div> 
No. of output points		32	
Insulation method		Photo-coupler insulation	
Rated load voltage		12VDC/24VDC	
Rated load voltage range		10.2 to 30VDC (peak voltage 30VDC)	
Max. load current		0.1A/point (100%)	
Leakage current at OFF		0.1mA or less	
Max. voltage drop at ON		0.9VDC (TYP.) ^{Note1)}	
Response time	OFF-ON	2ms or less (hardware response time)	
	ON-OFF	2ms or less (Resistance load) (hardware response time)	
Fuse rating		Fuse 3.2A (one per common) Replacement not possible	
Common method		8 points per common (common terminal: 4 points)	
External wire connection method		Connector	
External power supply	Voltage	12VDC/24VDC (10.2 to 30VDC)	
	Current	60mA (TYP. 24VDC per common) (base drive current)	

Note1) The maximum voltage drop value at signal ON.

Refer to it for the equipment connected to the output circuit.

⚠ CAUTION

The output circuit protective fuses prevent failure in case of load short-circuit and improper connections. Please do not connect loads that cause the current to exceed the maximum rated current. If the maximum rated current is exceeded, the internal transistors may be damaged.

⚠ CAUTION

Inputs the power supply for control (DC cable-2) then inputs the controller's power supply.

R-TM	1-178288-3 (1)	1-175218-3 (2)	100Ω(1/4W) (1)	Equivalent to KOA.

Note 1) The 24V power supply is prepared by customer (The power consumption is approx. 0.3A.)

In the customer's system, do not ground the + side of 24V power supply prepared by customer for connect to the controller. (related with emergency stop and parallel input/output) If it connects with the controller under the condition that the + side is grounded, it will lead to failure of controller.

Note 2) The cable for general purpose can be used to the network cable. However, use the twisted shield cable of AWG#22(0.3mm²) or more.

Fig.3-28: Specifications for the connection cable

■ Installation method

The expansion parallel input/output unit is installed outside of the controller. Connect with the network connection cable (NETcable-1) from the RIO connector in the front of the controller.

Fig.3-29: Installing the parallel I/O unit

Fig.3-30: Connection method of expansion parallel I/O unit

■ Pin arrangement of the connector

Fig.3-31: Pin arrangement of the parallel I/O unit

■ Assignment of pin number and signal

The assignment range of the general-purpose input-and-output signal is fixed by the setup of the station number.

Although the combined use with the parallel I/O interface (2D-TZ368/2D-TZ378) of another option is also possible, please use the setup of the station number by the different number separately.

Table 3-31: Assignment of pin number and signal

Unit Number	Station number	CN100	CN300
1st set	0	Input: 0 to 15 Output: 0 to 15	Input: 16 to 31 Output: 16 to 31
2nd set	1	Input: 32 to 47 Output: 32 to 47	Input: 48 to 63 Output: 48 to 63
3rd set	2	Input: 64 to 79 Output: 64 to 79	Input: 80 to 95 Output: 80 to 95
4th set	3	Input: 96 to 111 Output: 96 to 111	Input: 112 to 127 Output: 112 to 127
5th set	4	Input: 128 to 143 Output: 128 to 143	Input: 144 to 159 Output: 144 to 159
6th set	5	Input: 160 to 175 Output: 160 to 175	Input: 176 to 191 Output: 176 to 191
7th set	6	Input: 192 to 207 Output: 192 to 207	Input: 208 to 223 Output: 208 to 223
8th set	7	Input: 224 to 239 Output: 224 to 239	Input: 240 to 255 Output: 240 to 255

The connector pin number of the parallel I/O unit of the station number 0 and signal number assignment are shown in [Table 3-32](#) and [Table 3-33](#). If it is set as other station number, please interpret and utilize.

<Reference> The example of connection with our PLC

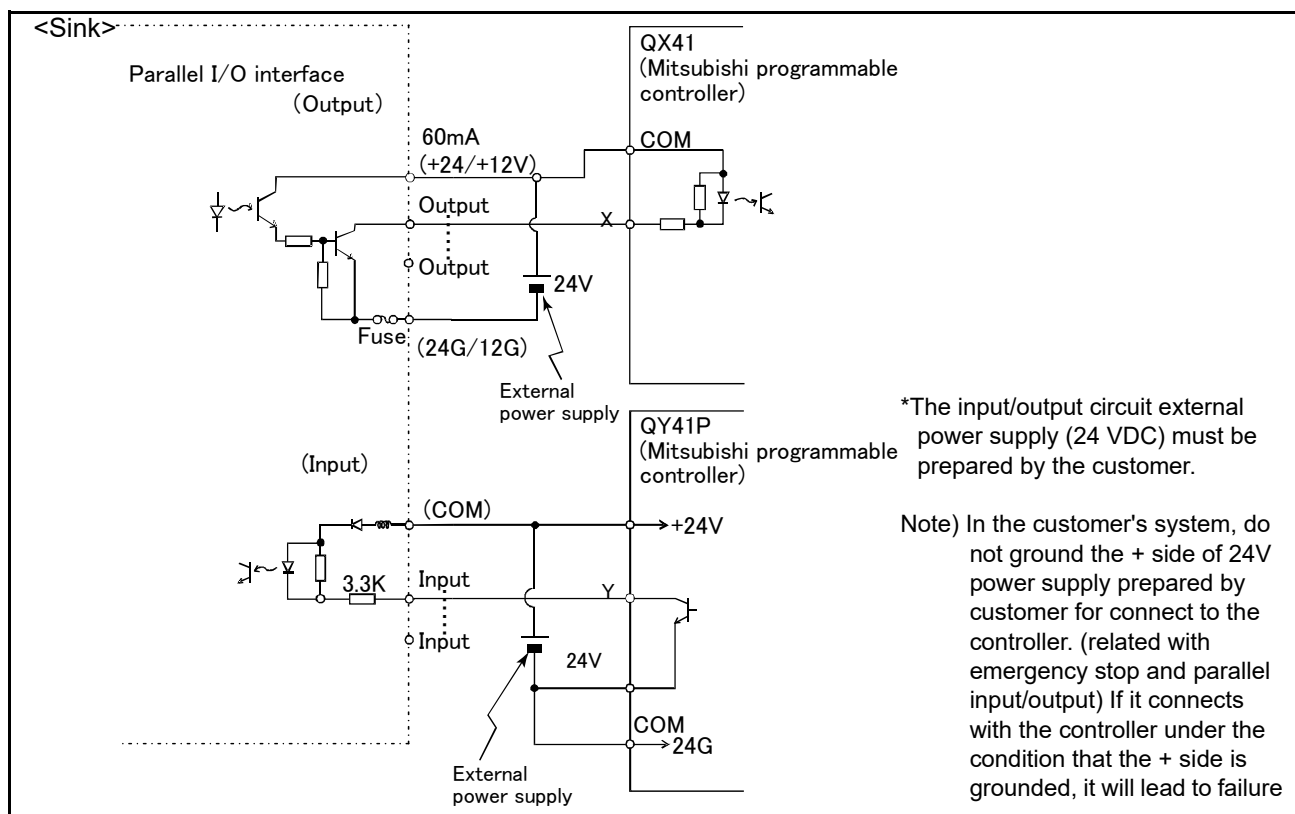

Fig.3-32: Connection with a Mitsubishi PLC (Example of sink type)

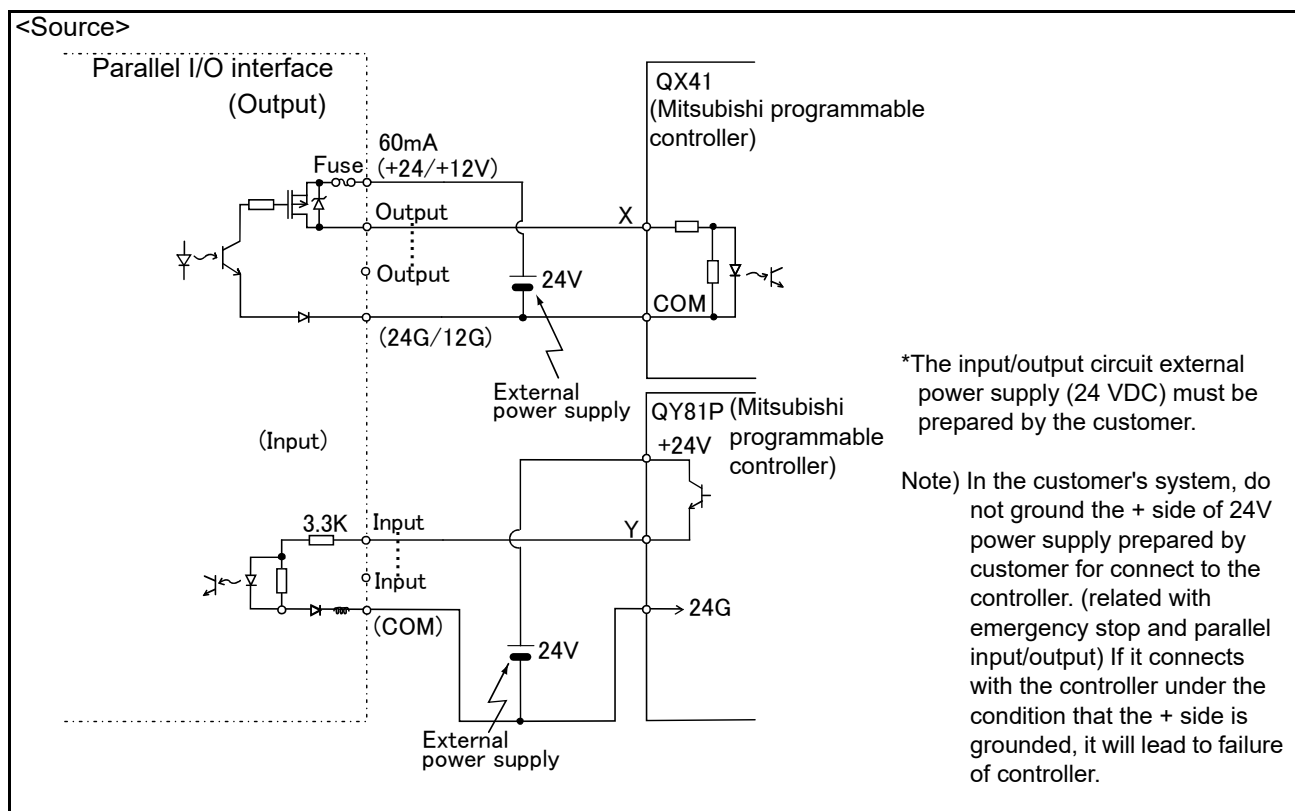

Fig.3-33: Connection with a Mitsubishi PLC (Example of source type)

(9) External I/O cable

■Order type: 2A-CBL□□ Note)The numbers in the boxes□□ refer to the length.(05: 5m, 15: 15m)

■Outline

This is the dedicated cable used to connect an external peripheral device to the connector on the parallel input/output unit.

One end matches the connector on the parallel input/output unit, and the other end is free. Connect the peripheral device's input/output signal using the free end.

One cable correspond to the input 16 points and output 16 points.

Two cables are needed to connection of (input 32 points and output 32 points) with built-in standard.

■Configuration

Table 3-34: Configuration device

Part name	Type	Qty.	Mass(kg) ^{Note1)}	Remarks
External I/O cable	2A-CBL□□	1pc.	0.7(5m) 1.84(15m)	5m or 15m

Note1) Mass indicates one set.

■Specifications

Table 3-35: Specifications

Items	Specifications
Number of cables x cable size	50 pairs x AWG #28
Total length	5m or 15m

■Connector pin numbers and cable colors

Table 3-36: Connector pin numbers and cable colors

Pin no.	Cable colors	Pin no.	Cable colors	Pin no.	Cable colors	Pin no.	Cable colors	Pin no.	Cable colors
1	Orange/Red A	11	Orange/Red C	21	Orange/Red E	31	Orange/Blue B	41	Orange/Blue D
2	Gray/Red A	12	Gray/Red C	22	Gray/Red E	32	Gray/Blue B	42	Gray/Blue D
3	White/Red A	13	White/Red C	23	White/Red E	33	White/Blue B	43	White/Blue D
4	Yellow/Red A	14	Yellow/Red C	24	Yellow/Red E	34	Yellow/Blue B	44	Yellow/Blue D

7	Gray/Red B	17	Gray/Red D	27	Gray/Blue A	37	Gray/Blue C	47	Gray/Blue E
8	White/Red B	18	White/Red D	28	White/Blue A	38	White/Blue C	48	White/Blue E
9	Yellow/Red B	19	Yellow/Red D	29	Yellow/Blue A	39	Yellow/Blue C	49	Yellow/Blue E
10	Pink/Red B	20	Pink/Red D	30	Pink/Blue A	40	Pink/Blue C	50	Pink/Blue E

■Connections and outside dimensions

The sheath of each signal cable (50 lines) is color indicated and marked with dots. Refer to the cable color specifications in "Table 3-36: Connector pin numbers and cable colors" when making the connections.

(Eg.) Pin number: color indication

1 : Orange / Red / A

Fig.3-34: Connections and outside dimensions

(10) CC-Link interface

■Order type: ●2D-TZ576

■Outline

The CC-Link interface is the option interface to not only add bit data to the robot controller, but also to add CC-Link field network function that allows cyclic transmission of word data.

■Configuration

Table 3-37: Configuration device

Part name	Type	Qty.	Mass(kg) ^{Note1)}	Remarks
CC-Link interface	TZ576	1	0.6

Specifications

Table 3-39: Specifications

Item			Specifications					Remarks
Communication function			Bit data and word data can be transmitted.					Word data are used by the registers.
Station type			Intelligent device station ^{Note1)}					
Support station			Local station					No master station function
The version corresponding to CC-Link			Ver.2					The extended cyclic setup is possible.
Mountable option slot			Slot 1, 2					
Number of mountable CC-Link interface cards			1					Multiple CC-Link interface cards cannot be inserted.
Number of stations			1 to 64 stations					When four stations are occupied, continuous station numbers are used. The station numbers are set by a DIP switch.
Transmission speed			10M/5M/2.5M/625K/156K bps					This is set by the rotary SW.
Station number			1 to 64					When two or more stations are occupied, continuous station numbers are used.
Number of occupied stations			1/2/3/4					
Extended cyclic setup			1/2/4/8					
Maximum link point		Remote I/O (RX, RY).	Each 896 points				The two last cannot be used.	
		Remote register (RW _r , RW _w)	Each 128 register				16 bits/register	
Extended cyclic setup		-	1 fold setup	2 fold setup	3 fold setup	4 fold setup		
Link point per set	When one station is occupied	Remote I/O (RX, RY).	32 point	32 point	64 point	128 point		
		Remote register (RW _w)	4 word	8 word	16 word	32 word		
		Remote register (RW _r)	4 word	8 word	16 word	32 word		
	When two stations is occupied	Remote I/O (RX, RY).	64 point	96 point	192 point	384 point		
		Remote register (RW _w)	8 word	16 word	32 word	64 word		
		Remote register (RW _r)	8 word	16 word	32 word	64 word		
	When three stations is occupied	Remote I/O (RX, RY).	96 point	160 point	320 point	640 point		
		Remote register (RW _w)	12 word	24 word	48 word	96 word		
		Remote register (RW _r)	12 word	24 word	48 word	96 word		
	When four stations is occupied	Remote I/O (RX, RY).	128 point	224 point	448 point	896 point		
		Remote register (RW _w)	16 word	32 word	64 word	128 word		
		Remote register (RW _r)	16 word	32 word	64 word	128 word		
Number of the maximum occupancy station			4 stations					
The I/O first number of the robot controller.			No. 6000 -. The number corresponding to the station number by the setup of the parameter "CCFIX."					

Note1) The CC-Link interface supports neither the transient transmission function nor the FX series.

■ Functions

(1) Communication function

- The number of usable points is 896 points maximum for bit control and 128 points maximum for word control.

(2) Easy setup

- The CC-Link interface card can be set by a rotary switch or DIP switch.
- No separate space is required to mount the CC-Link interface card as it is embedded in the robot controller (can only be mounted into slot 2).
- Easy wiring since only four terminals need to be connected.
- Dedicated commands have been added to MELFA-BASIC V, VI (robot programming language); thus, no complex interface programming is required.

(3) High-speed response

- The link scan time when connecting 64 stations is approximately 7.2 ms.
- A transmission speed can be selected from 10M, 5M, 2.5M, 625K and 156K bps according to the transmission distance.

(11) SD memory card

■Order type: 2F-2GBSD

■Outline

This card is used as an extended memory.

To save logging data, insert an SD card into the SD card slot on the front of the robot controller.

■Configuration

Table 3-40: Configuration device

Part name	Type	Qty.	Remarks
SD memory card	2F-2GBSD	1	Memory card capacity: 2GB

3.10 Maintenance parts

The consumable parts used in the controller are shown in [Table 3-41](#). Purchase these parts from your dealer when required. Some Mitsubishi-designated parts differ from the maker's standard parts. Thus, confirm the part name, robot arm and controller serial No. and purchase the parts from your dealer.

Table 3-41: Controller consumable parts list

No.	Name	Type ^{Note1)}	Qty.	Usage place	Supplier
1	Filter	BKOFA0773H42	1	Inside the filter cover	Mitsubishi Electric

Note1) Confirm the robot arm serial No., and contact the dealer or service branch of Mitsubishi Electric Co., for the type.

4 Software

4.1 List of commands

The available new functions in MELFA-BASIC VI are given in [Table 4-1](#).

Table 4-1: List of MELFA-BASIC VI commands

Type	Class	Function	Input format (example)
Structured programming	Function procedure	Defines the Function procedure. Function procedure summarizes a series of processing enclosed by the Function statement and the FEnd statement.	Function M Func(M1, M2) M3=M1+M2 Func=M3 Exit Function FEnd
	Library function	#Include statement	Reads the designated program. #Include "PRG1"
Position and operation control	Interpolation operation	Moves to the multiple designated positions with the designated interpolation operations and options.	Move L, P1, P2, P3, Spd=50
	Joint interpolation	Moves to the designated position with joint interpolation.	Mov P1
	Linear interpolation	Moves to the designated position with linear interpolation.	Mvs P1
	Circular interpolation	Moves along a designated arc (start point→passing point→start point (end point)) with 3-dimensional circular interpolation (360 degrees).	Mvc P1,P2,P1
		Moves along a designated arc (start point→passing point→end point) with 3-dimensional circular interpolation.	Mvr P1,P2,P3
		Moves along the arc on the opposite side of a designated arc (start point→reference point→end point) with 3-dimensional circular interpolation.	Mvr2 P1,P9,P3
		Moves along a set arc (start point→end point) with 3-dimensional circular interpolation.	Mvr3 P1,P9,P3
	Speed designation	Designates the speed for various interpolation operations with a percentage (0.1% unit).	Ovrd 100
		Designate the speed for joint interpolation operation with a percentage (0.1% unit).	JOvrd 100
		Designates the speed for linear and circular interpolation with a numerical value (mm/s unit).	Spd 123.5
		Designates the acceleration/deceleration time as a percentage in respect to the predetermined maximum acceleration/deceleration. (1% unit)	Accel 50,80
		Automatically adjusts the acceleration/deceleration according to the parameter setting value.	Oadl ON
		Sets the hand and work conditions for automatic adjustment of the acceleration/deceleration.	Loadset 1,1
	Operation	Adds a process unconditionally to the operation.	Wth
		Adds a process conditionally to the operation.	Wthlf
		Designates smooth operation.	Cnt 1,100,200
		Performance of movement is upgraded corresponding to the application.	MvTune 4
		Designates the positioning completion conditions with a No. of pulses.	Fine 200
		Designates the positioning completion conditions with a distance in a straight line	Fine 1, P
		Turns the servo power ON/OFF for all axes.	Servo OFF
		Limits the operation of each axis so that the designated torque is not exceeded.	Torq 4,10
	Position control	Designates the base conversion data.	Base P1
		Designates the tool conversion data.	Tool P1
	Float control	The robot arm rigidity is lowered and softened. (XYZ coordinate system)	Cmp Pos ,&B00000011
		The robot arm rigidity is lowered and softened. (JOINT coordinate system)	Cmp Jnt ,&B00000011
		The robot arm rigidity is lowered and softened. (TOOL coordinate system)	Cmp Tool ,&B00000011
		The robot arm rigidity is returned to the normal state.	Cmp Off
		The robot arm rigidity is designated.	CmpG 1.0,1.0,1.0,1.0,1.0,1.0,1.0,1.0, 0

Type	Class	Function	Input format (example)
Position and operation control	Pallet	Defines the pallet.	Def Plt 1,P1,P2,P3,P4,5,3,1
		Operates the pallet grid point position.	Plt 1,M1
	Singular point passage	Move to a specified position using linear interpolation passing through a singular point.	Mvs P1 Type 0,2
	Branching	Branches unconditionally to the designated place.	GoTo *LBL
		Branches according to the designated conditions.	If M1=1 Then GoTo *L100 Else GoTo *L200 EndIf
		Repeats until the designated end conditions are satisfied.	For M1=1 To 10 Next M1
		Repeats while the designated conditions are satisfied.	While M1<10 WEnd
		Branches corresponding to the designated expression value.	On M1 GoTo *La1, *La2, *La3
		Executes program block corresponding to the designated expression value.	Select Case 1 Break Case 2 Break End Select
		Moves the program process to the next line.	Skip
	Collision detection	Set to enable/disable the collision detection.	ColChk On/Off
		Set the detection level of the collision detection.	Collvl 100,80,,,,,
	Subroutine	Executes the designated subroutine. (Within program)	GoSub *L200
		Returns from the subroutine.	Return
		Executes the designated program.	CallP "P10",M1,P1
		Defines the program argument executed with the CALLP command.	FPm M10,P10
		Executes the subroutine corresponding to the designated expression value.	On M1 GoSub*La1,*La2,*La3
	Interrupt	Defines the interrupt conditions and process.	Def Act 1, M1=1 GoTo *L123
		Enables/disables the interrupt.	Act 1=1
		Defines the start line of the program to be executed when an interrupt is generated from the communication line.	On Com(1) GoSub *LABC
		Enables the interrupt from the communication line.	Com(1) On
		Disables the interrupt from the communication line.	Com(1) Off
		Stops the interrupt from the communication line.	Com(1) Stop
	Wait	Designates the wait time, and the output signal pulse output time. (0.01s unit)	Dly 0.5
		Waits until the variable becomes the designated value.	Wait M_In(20)=1
	Stop	Stops the program execution.	Hlt
		Generates an error. During program execution, continue, stop or servo OFF can be designated.	Error 9000
	End	Ends the program execution.	End
Hand	Hand open	Opens the designated hand.	HOpen 1
	Hand close	Closes the designated hand.	HClose 1
Input/output	Assignment	Defines the input/output variables.	Def IO PORT1=Bit,99
	Input	Retrieves the general-purpose input signal.	M1=M_In (78)
	Output	Calls out the general-purpose output signal.	M_Out(23) =0
Parallel execution	Mechanism designation	Acquires the mechanism with the designated mechanism No.	GetM 1
		Releases the mechanism with the designated mechanism No.	RelM 1
	Selection	Selects the designated program for the designated slot.	XLoad 2,"P102"
	Start/stop	Carries out parallel execution of the designated program.	XRun 3,"100",0
		Stops parallel execution of the designated program.	XStp 3
		Returns the designated program's execution line to the head and enters the program selection enabled state.	XRst 3

Type	Class	Function	Input format (example)
Others	Definition	Defines the integer type or real number type variable.	Def Inte KAISUU
		Defines the character string variable.	Def Char MESSAGE
		Defines the layout variable. (Up to 3-dimensional possible)	Dim PDATA(2,3)
		Defines the joint variable.	Def Jnt TAIHI
		Defines the position variable.	Def Pos TORU
		Defines the function.	Def FN TASU(A,B)=A+B
	Clear	Clears the general-purpose output signal, variables in program, variables between programs, etc.	Clr 1
	File	Opens a file.	Open "COM1:" AS #1
		Closes a file.	Close #1
		Inputs data from a file.	Input #1,M1
		Outputs data to a file.	Print #1,M1
	Comment	Describes a comment.	Rem "ABC"
	Label	Indicates the branching destination.	*SUB1

4.2 List of parameters

Show the main parameter in the [Table 4-2](#).

Table 4-2: List of parameters

Parameter		Details
Standard tool coordinates.	MEXTL	Set the default value for the tool data. Unit: mm or deg.
Standard base coordinates	MEXBS	Set the relation of the world coordinate system and robot coordinate system. Unit: mm or deg.
XYZ operation range	MEPAR	Designate the overrun limit value for the world coordinate system.
JOINT operation range	MEJAR	Set the overrun limit value for each joint axis.
Free plane limit		This is the overrun limit set with the free plane. Create a plane with the three coordinates x1, y1, z1 to x3, y3, z3, and set the outer side of the plane as the outside operation range (error). The following three types of parameters are used.
	SFC1P : SFC8P	Eight types of free plane limits can be set in SFC1P to SFC8P. There are nine elements, set in the order of x1, y1, z1, x2, y2, z2, x3, y3, z3.
	SFC1ME : SFC8ME	Designate which mechanism to use eight types of set free plane limits. The mechanism No. to use is set with 1 to 3.
	SFC1AT : SFC8AT	Set the validity of the eight types of set free plane limits. (Valid 1/Valid 2/invalid = 1/-1/0)
User-defined area		An area (cube) defined with two XYZ coordinate points can be designated and that area set as the outside operation range. Furthermore, a signal can be output when the axis enters that area. Up to 32 types of area can be designated.
	AREA1CS : AREA32CS	Specify the coordinate system of the user definition area *. 0: Base coordinate system (conventional compatibility) 1: Robot coordinate system
	AREA1P1 : AREA32P1	Designated the 1st point of the area. There are eight elements, set in the order of x, y, z, a, b, c, L1, L2. (L1 and L2 are the additional axes.)
	AREA1P2 : AREA32P2	Designated the 2nd point of the area. There are eight elements, set in the order of x, y, z, a, b, c, L1, L2. (L1 and L2 are the additional axes.)
	AREA1ME : AREA32ME	Designate which mechanism to use the 32 types of set area. The mechanism No. to use is set with 1 to 3.
	AREA1AT : AREA32AT	Designate the area check type. (Invalid/zone/interference = 0/1/2) Zone: The dedicated output signal USRAREA turns ON. Interference: An error occurs..
Automatic return setting	RETPATH	Set to restart the program after returning to the interrupt position when resuming operation after an interruption.
Buzzer ON/OFF	BZR	Designate whether to turn the buzzer ON or OFF.
Jog setting	JOGJSP	Designate the joint jog and step operation speed. (Set dimension H/L amount, max. override.)
	JOGPSP	Designate the linear jog and step operation speed. (Set dimension H/L amount, max. override.)
Jog speed limit value	JOGSPMX	Limit the operation speed during the teaching mode. Max. 250[mm/s]
Hand type	HANDTYPE	Set the hand type of the single/double solenoid, and the signal No. (Single/double = S/D) Set the signal No. after the hand type. Example) D900
Stop input B contact designation	INB	Change the dedicated input (stop) to either of normal open or normal close.

Parameter		Details
User-designated origin	USERORG	Designate the user-designated origin position.
Program selection memory	SLOTON	Select the program selected previously when initializing the slot. The non-selected state will be entered when not set.
Communication setting	CBAU232	Set the baud rate.
	CLEN232	Set the character length.
	CPRTY232	Set the parity.
	CSTOP232	Set the stop bit.
	CTERM232	Set the end code.
Slot table	SLT1 : SLT32	Make settings (program name, operation type, order of priority, etc.) for each slot during slot initialization.
No. of multi-tasks	TASKMAX	Designate the No. of programs to be executed simultaneously. (Max. 32)
Select the function of singular point adjacent alarm	MESNGLS W	Designate the valid/invalid of the singular point adjacent alarm. (Invalid/Valid =0/1) When this parameter is set up "VALID", this warning sound is buzzing even if parameter: BZR (buzzer ON/OFF) is set up "OFF".
Display language	LNG	Sets the display language on the RT ToolBox3 (option).

5 Instruction Manual

5.1 The details of each instruction manuals

The contents and purposes of the documents enclosed with this product are shown below.

Use these documents according to the application.

For special specifications, a separate instruction manual describing the special section may be enclosed.

Manual name	Description
Safety Manual	Explains the common precautions and safety measures to be taken for robot handling, system design and manufacture to ensure safety of the operators involved with the robot.
Standard Specifications	Explains the product's standard specifications, factory-set special specifications, option configuration and maintenance parts, etc. Precautions for safety and technology, when incorporating the robot, are also explained.
Robot Arm Setup & Maintenance	Explains the procedures required to operate the robot arm (unpacking, transportation, installation, confirmation of operation), and the maintenance and inspection procedures.
Controller setup, basic operation, and maintenance	Explains the procedures required to operate the controller (unpacking, transportation, installation, confirmation of operation), basic operation from creating the program to automatic operation, and the maintenance and inspection procedures.
Detailed explanations of functions and operations	Explains details on the functions and operations such as each function and operation, commands used in the program, connection with the external input/output device, and parameters, etc.
Troubleshooting	Explains the causes and remedies to be taken when an error occurs. Explanations are given for each error No.
Additional axis function	Explains the specifications, functions and operations of the additional axis control.
Tracking Function	Explains the control function and specifications of conveyor tracking.
GOT Direct Connection Extended Function	Explains the detailed description of data configuration of shared memory, monitoring, and operating procedures about the GOT (standalone type robot).
Ethernet Function	Explains the measures to perform communication with personal computers on Ethernet with the TCP/IP protocol.

6 Safety

6.1 Safety

Measures to be taken regarding safety of the industrial robot are specified in the "Labor Safety and Sanitation Rules". Always follow these rules when using the robot to ensure safety.

6.1.1 Self-diagnosis stop functions

This robot has the self-diagnosis stop functions shown in [Table 6-1](#) and the stop functions shown in [Table 6-2](#) for safe use.

Table 6-1: Self-diagnosis stop functions

No.	Function		Details	Remarks
1	Overload protection function		Activates when the total servo current time exceeds the specified value.	The drive circuit is shut off. The robot stops, and an alarm displays.
2	Overcurrent diagnosis function		Activates when an overcurrent flows to the motor circuit.	The drive circuit is shut off. The robot stops, and an alarm displays.
3	Encoder disconnection diagnosis function		Activates when the encoder cable is disconnected.	The drive circuit is shut off. The robot stops, and an alarm displays.
4	Deflection over diagnosis function		Activates when an error occurs between the command value and actual position, and the error exceeds the specified amount.	The drive circuit is shut off. The robot stops, and an alarm displays.
5	AC power voltage drop diagnosis function		Activates when the AC power voltage drops below the specified value.	The drive circuit is shut off. The robot stops, and an alarm displays.
6	CPU error detection function		Activates when an error occurs in the CPU.	The drive circuit is shut off. The robot stops, and an alarm displays.
7	Overrun prevention function	Software limit detection	This is the limit provided by the software to enable operation only in the operation range.	The drive circuit is shut off. The robot stops, and an alarm displays.
		Mechanical stopper	This is the mechanical stopper provided outside the software.	The robot mechanically stops, and function 1 or 2 activates.

Table 6-2: List of stop functions

Stop function	Teaching pendant	External input	Details
Emergency stop	○	○	The servo power is shut off and the mechanical brakes activate to stop the robot by stopping operation in an emergency. To recover, reset the alarm, and turn the servo ON with the servo ON command.
Stop	○	○	The robot immediately decelerates to stop by stopping operation as usual. Note that the servo power is not shut off. Use this when using the collision evasion sensor, etc.

6.1.2 External input/output signals that can be used for safety protection measures

Table 6-3: External input/output signals that can be used for safety protection measures

Signal		Connection point	Parameter	Functions	Usage method
Input	External emergency stop <small>Note1)</small>	Connector CNUSR11	-	This servo power is shut off, and the robot stops immediately.	Externally installed emergency stop switch. Stopping at high-level error occurrence.
	Door switch input <small>Note1)</small>		-		The door switch of the safe protection fence.
	Stop	Parallel I/O unit or interface	STOP, STOP2	The program execution is stopped, and the robot stops. The servo power is not shut off.	The robot is stopped when a peripheral device fault occurs. The servo power is not shut off.
	Servo OFF		SRVOFF	The servo power can be shut off.	The robot is stopped when a peripheral device fault occurs. The servo power is also shut off.
	Automatic operation enable		AUTOENA	Disables automatic operation when inactive.	Door switch on safety protection fence.
Output	Emergency stop output	Connector CNUSR11	-	Outputs the input signal of external emergency stop or emergency stop switch of T/B turned on.	Display and warn the pilot lamp, the input signal of external emergency stop or the emergency stop switch of T/B turned on.
	In servo ON	Parallel I/O unit or interface	SRVON	The servo power ON/OFF state is output.	The servo power ON/OFF state is shown and alerted with the display lamps.
	Waiting		STOP, STOP2	Outputs that the robot is temporarily stopped.	The temporary stop state is shown and alerted with the display lamps.
	In alarm	Connector CNUSR11	ERRRESET	Outputs when an alarm occurs in the robot.	The alarm state is shown and alerted with the display lamps.

Note1) The external emergency stop input, door switch input, and mode selector switch input are provided with the redundancy of normally closed contacts for safety. Thus, if the emergency stop input circuit is opened when the robot is started up, the robot will not operate. Refer to [Page 100, "6.1.7 Examples of safety measures"](#) for details.

And, refer to [Page 48, "\(1\) Automatic Operation/Jog Operation/Brake Release and Necessary Switch Settings"](#) for the function of the door switch input and the mode selector switch input.

6.1.3 Precautions for using robot

The safety measures for using the robot are specified in the "Labor Safety and Sanitation Rules". An outline of the rules is given below.

(1) Robot installation

- Secure sufficient work space required to safely perform work such as teaching and maintenance related to the robot.
- Install the controller outside the robot's motion space. (If a safety fence is provided, install outside the fence.)
- Install the controller where the entire robot operation can be viewed.
- Install display lamps, etc., to indicate the robot's operation state.
- Securely fix the robot arm onto the fixing table with the designated bolts.

(2) Prevention of contact with operator

- Install a safety fence or enclosure so that the operator cannot easily enter the robot's motion space.
- Install an interlock function that will stop the robot if the safety fence or enclosure door is opened.

(3) Work procedures

- Create and observe work procedures for the robot teaching, operation, inspection and emergencies.
- Create hand signals to be followed when several operators are working together.
- Create displays such as "Teaching in Progress" and "Inspection in Progress" to be put up when an operator is in the robot's motion space so that other operators will not operate the operation panel (controller, control panel).

(4) Training

- Train the operators about the operations, maintenance and safety required for the robot work.
- Only trained and registered operators must operate the robot.
Participation in the "Special training for industrial robots" sponsored by the Labor Safety and Sanitation Committee, etc., is recommended for safety training.

(5) Daily inspection and periodic inspection

- Always inspect the robot before starting daily operations and confirm that there are no abnormalities.
- Set the periodic inspection standards in view of the robot's ambient environment and operation frequency, and perform periodic inspections.
- Make records when periodic inspections and repairs have been done, and store the records for three or more years.

6.1.4 Safety measures for automatic operation

- (1) Install safety fences so that operators will not enter the operation area during operation and indicate that automatic operation is in progress with lamps, etc.
- (2) Create signals to be given when starting operation, assign a person to give the signal, and make sure that the operator follows the signals.

6.1.5 Safety measures for teaching

Observe the following measures when teaching, etc., in the robot's operation range.

- (1) Specify and follow items such as procedures related to teaching work, etc.
- (2) Take measures so that operation can be stopped immediately in case of trouble, and measures so that operation can be restarted.
- (3) Take measures with the robot start switch, etc., to indicate that teaching work is being done.
- (4) Always inspect that stop functions such as the emergency stop device before starting the work.
- (5) Immediately stop the work when trouble occurs, and correct the trouble.
- (6) Take measures so that the work supervisor can immediately stop the robot operation when trouble occurs.
- (7) The teaching operator must have completed special training regarding safety. (Training regarding industrial robots and work methods, etc.)
- (8) Create signals to be used when several operators are working together.

6.1.6 Safety measures for maintenance and inspections, etc.

Turn the power OFF and take measures to prevent operators other than the relevant operator from pressing the start switch when performing inspections, repairs, adjustments, cleaning or oiling.

If operation is required, take measures to prevent hazards caused by unintentional or mistaken operations.

- (1) Specify and follow items such as procedures related to maintenance work, etc.
- (2) Take measures so that operation can be stopped immediately in case of trouble, and measures so that operation can be restarted.
- (3) Take measures with the robot start switch, etc., to indicate that work is being done.
- (4) Take measures so that the work supervisor can immediately stop the robot operation when trouble occurs.
- (5) The operator must have completed special training regarding safety. (Training regarding industrial robots and work methods, etc.)
- (6) Create signals to be used when several operators are working together.

6.1.7 Examples of safety measures

Two emergency-stop input circuits are prepared on the user wiring terminal block of the controller. The safety measure examples are shown in Fig. 6-1 to Fig. 6-4. Create a circuit as shown below for safety measures. In addition, the figure shows the normal state which is not in the emergency stop state.

[Note] • In the emergency-stop related wiring by the customer, if the coil (is not the contact points) of the relay prepared by the customer is connected to the controller, please be sure to implement the measure against the noise by the customer in the coil section. And, please also take the lifetime of noise suppression parts into consideration.

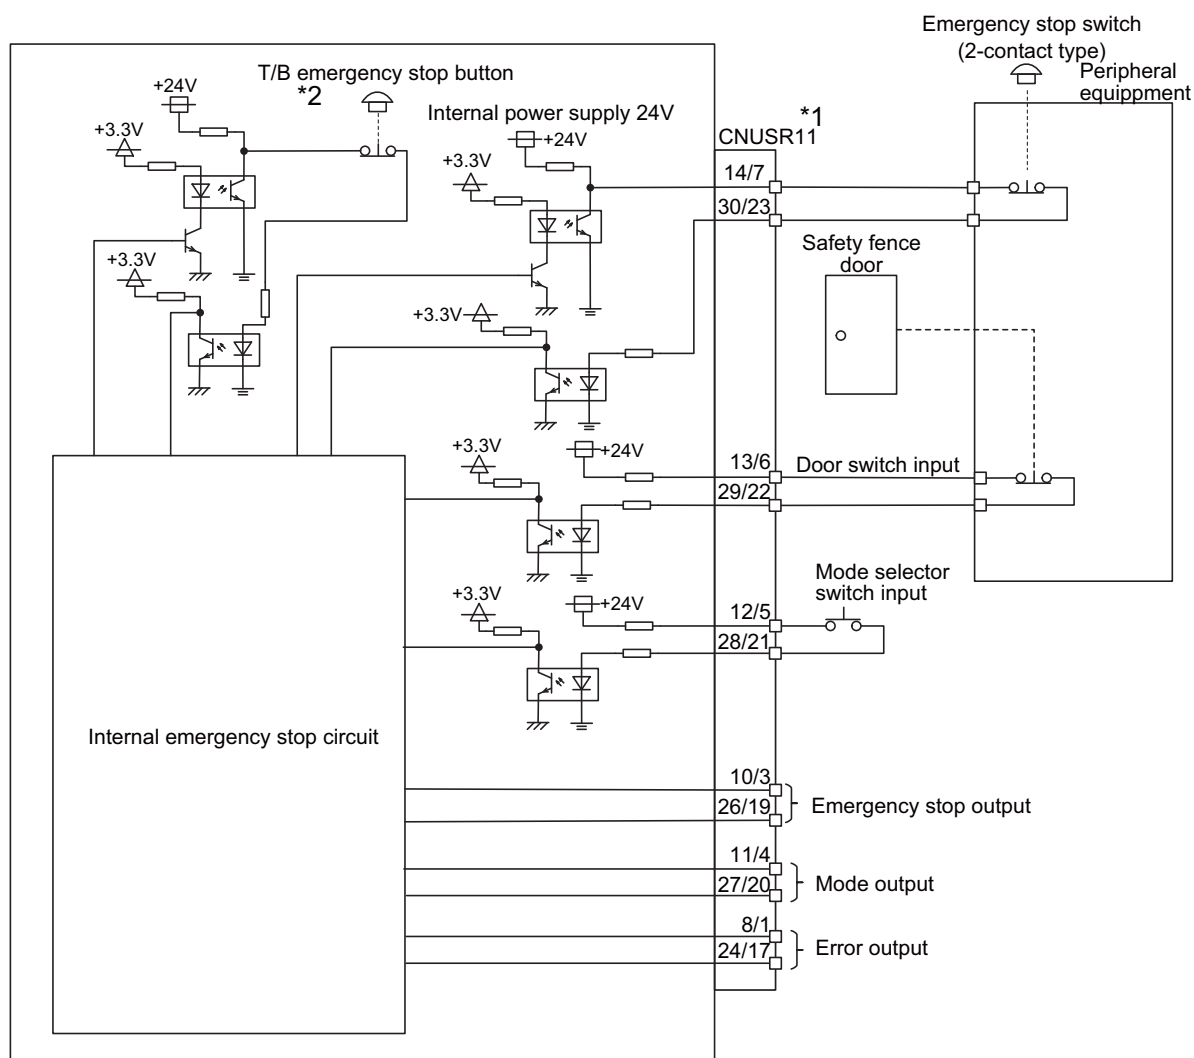

- Electric specification of the emergency-stop-related output terminal: 24V DC or less, related current 100mA or less.
- In the customer's system, do not ground the + side of 24V power supply prepared by customer for connect to the controller. (related with emergency stop and parallel input/output) If it connects with the controller under the condition that the + side is grounded, it will lead to failure of controller.

<Wiring example 1>: Connect the emergency stop switch of peripheral equipment to the controller.

The power supply for emergency stop input uses the power supply in the controller.

<Operation of the emergency stop>

If the emergency stop switch of peripheral equipment is pushed, the robot will also be in the emergency stop state.

*1) The CNUSR11 connector is a two-level terminal block, indicating that there are two circuits (channels). Two terminals (cable insertion holes) need to be used for one circuit.

*2) The T/B emergency stop button connected with the controller.

Fig.6-1: Example of safety measures (wiring example 1)

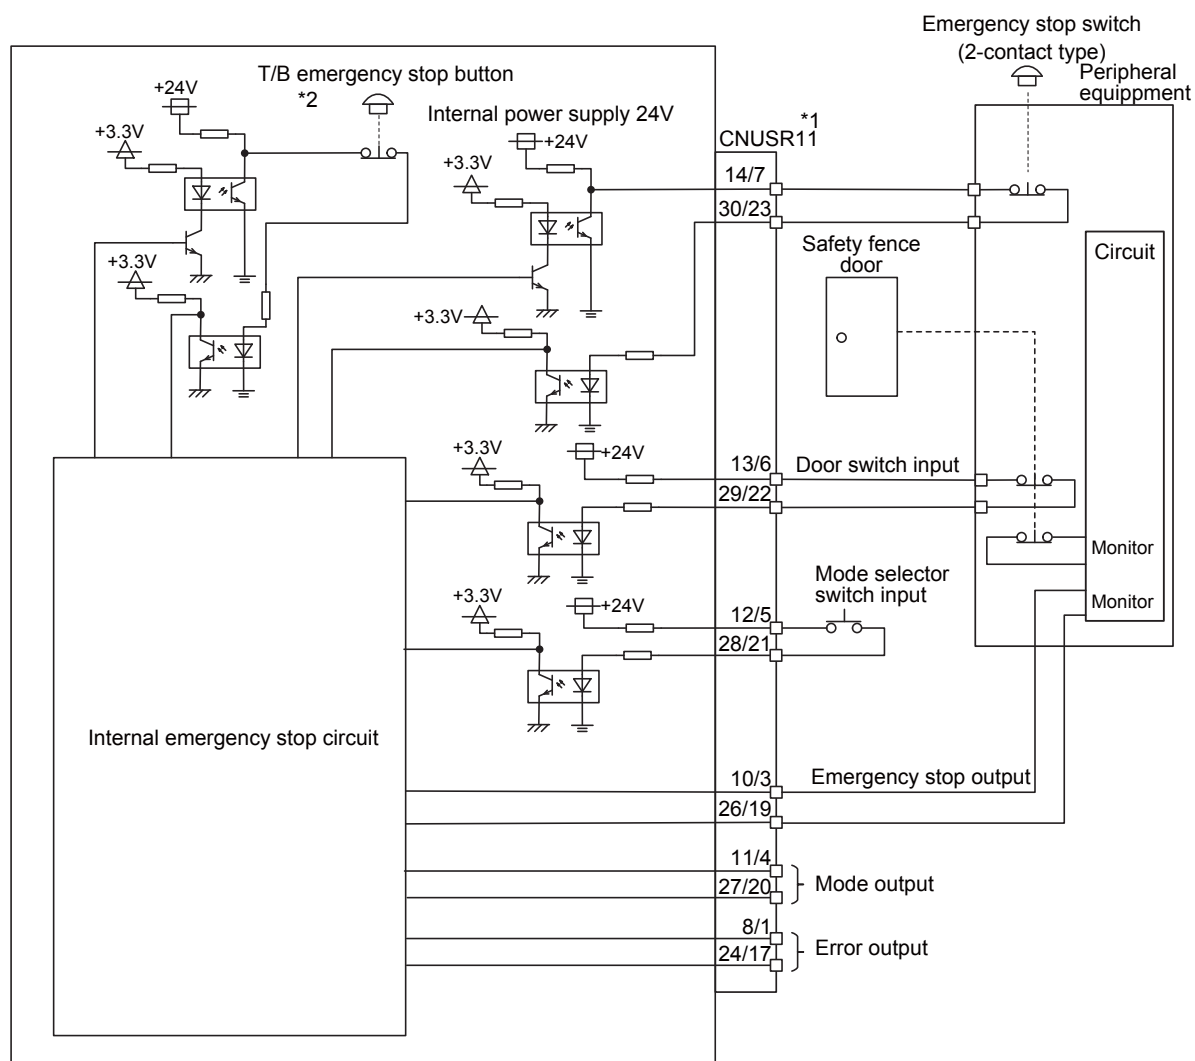

<Wiring example 2>: Connect the emergency stop switch, and door switch of peripheral equipment to the controller.

The power supply for emergency stop input uses the power supply in the controller. Monitor the emergency stop state by the peripheral equipment side.

<Operation of the emergency stop>

If the emergency stop switch of peripheral equipment is pushed, the robot will also be in the emergency stop state.

When the controller power is OFF, the peripheral devices are in the emergency stop state.

*1) The CNUSR11 connector is a two-level terminal block, indicating that there are two circuits (channels).

Two terminals (cable insertion holes) need to be used for one circuit.

*2) The T/B emergency stop button connected with the controller.

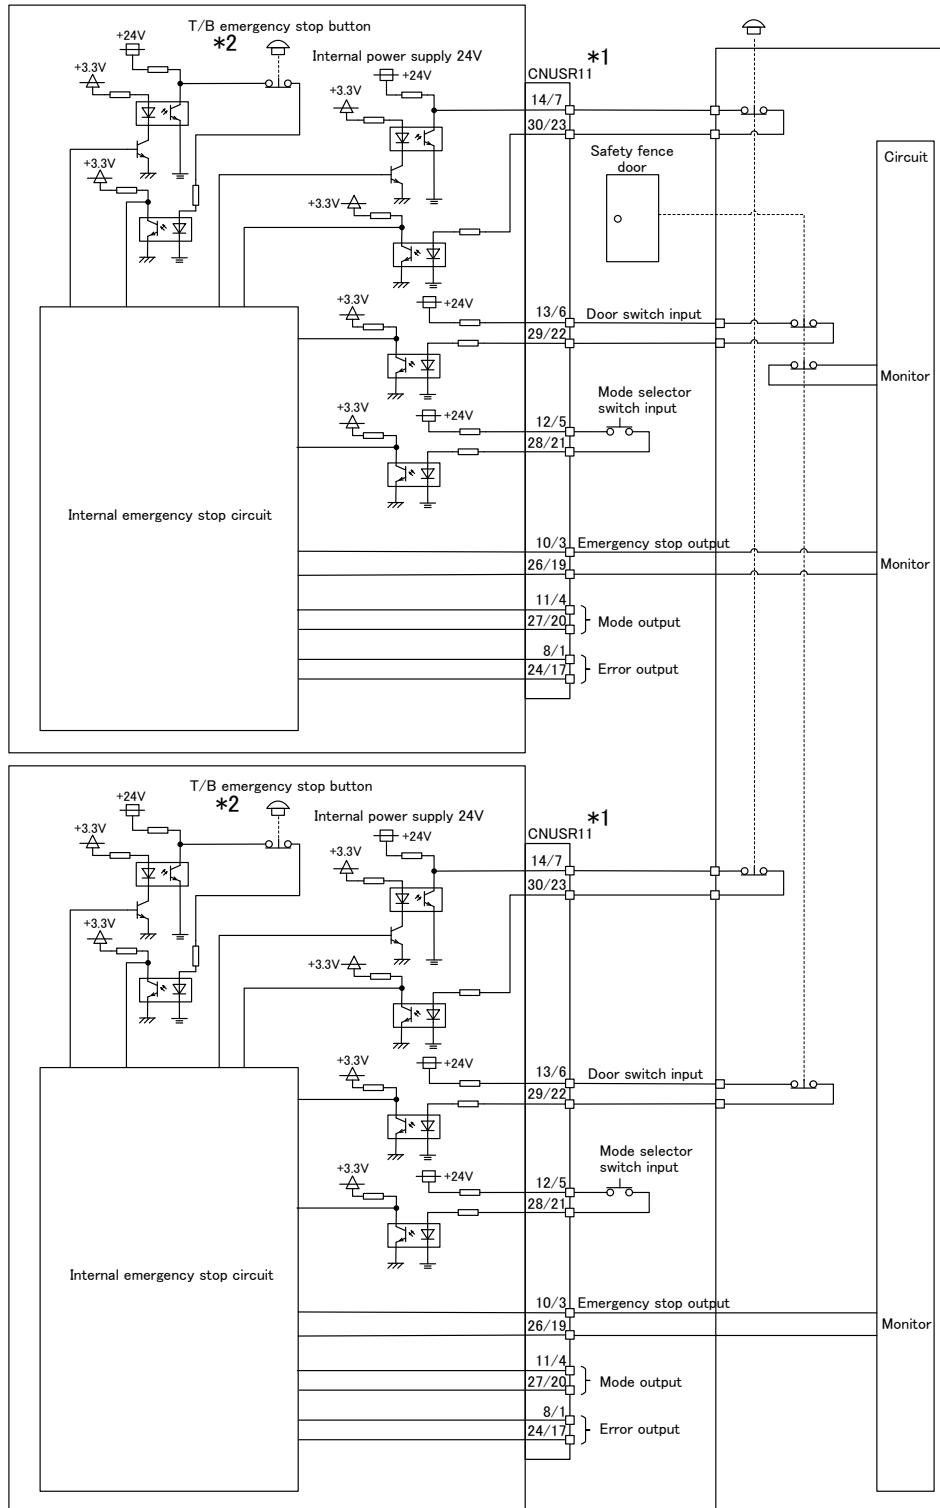

Fig.6-2: Example of safety measures (wiring example 2)

<Wiring example 3>: Connect the emergency stop switch of peripheral equipment, and the door switch to two controllers, and it interlocks. The power supply for emergency stop input uses the power supply of peripheral equipment. Monitor the emergency stop state by the peripheral equipment side.

<Operation of the emergency stop>

If the emergency stop switch of peripheral equipment is pushed, the robot will also be in the emergency stop state.

When the controller power is OFF, the peripheral devices are in the emergency stop state.

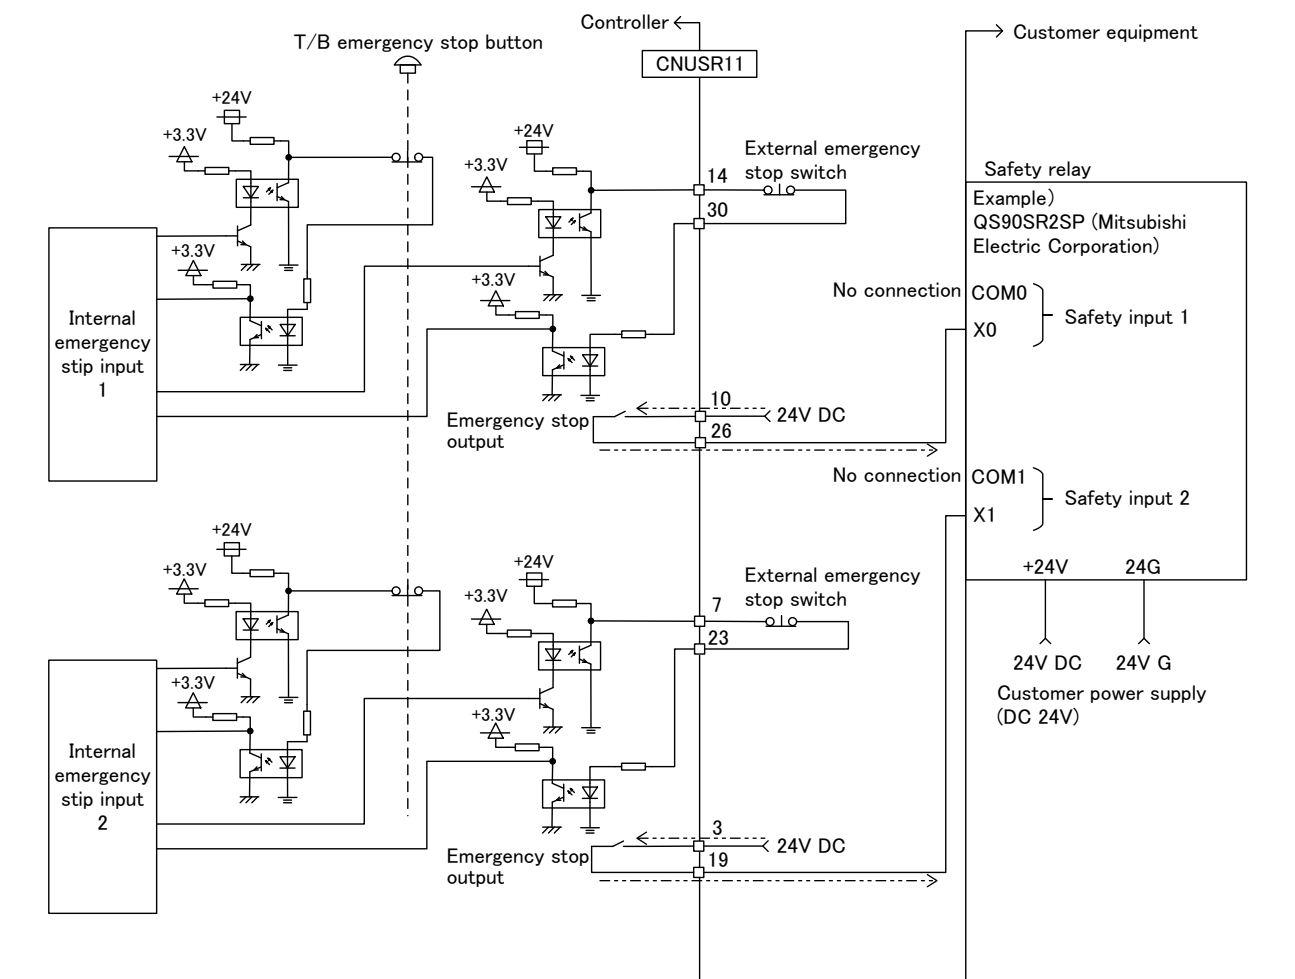

*1) The CNUSR11 connector is a two-level terminal block, indicating that there are two circuits (channels). Two terminals (cable insertion holes) need to be used for one circuit.

*2) The T/B emergency stop button connected with the controller.

Fig.6-3: Example of safety measures (wiring example 3)

<Wiring example 4>: Connect the controller to the safety relay
Use the controller's emergency stop button to input safety relay.

[Caution]

- 1) Setup a safety relay on the user equipment, and when using to input the emergency stop button on the controller, please only use a safety relay that functions when connecting the input to the one end of the 2 systems (i.e. QS90SR2SP (Manufacture: Mitsubishi Electric Corporation)).
- 2) When connecting emergency stop button output to an exterior safety relay, please take note of the polarity and make sure that the electrical current flows in the same direction as indicated by the dotted arrows in the two places in the diagram. If the polarity is setup incorrectly this function will not operate correctly. Please connect 3 and 10 terminal of CNUSR11 connector to 24V.

Fig.6-4: Example of safety measures (wiring example 4)

(1) External emergency stop connection [supplementary explanation]

- (1) Use a 2-contact type switch for all switches.
- (2) Install a limit switch on the safety fence's door. With a constantly open contact (normal open), wire to the door switch input terminal so that the switch turns ON (is conducted) when the door is closed, and turns OFF (is opened) when the door is open.
- (3) Use a manual-return type of normal close which have two lines for the emergency stop button.
- (4) Classify the faults into minor faults (faults that are easily restored and that do not have a great effect) and major faults (faults that cause the entire system to stop immediately, and that require care in restoration), and wire accordingly.

[Caution] The emergency stop input (terminal block) on the user wiring in the controller can be used for safety measures as shown in figure above. Note that there are limits to the No. of switch contacts, capacity and cable length, so refer to the following and install.

- Switch contact Prepare a 2-contact type. ^{*1)}
- Switch contact capacity Related current of 24 VDC or higher for a no-voltage contact. ^{*1)}
- Cable length The length of the wire between the switch and terminal block must be max. 15m or less. Please use the shield line, in case of the cable may receive the noise etc. by other equipment, such as servo amplifier. And, if it is necessary, please fix a ferrite core (recommended model name: E04SR301334, manufacturer: Seiwa Electric Mfg. Co., Ltd.) to the shielded cable.
The size of the wire that fits to use is shown below.
CNUSR11 connector: AWG24 to 16 (0.2 to 1.25mm²)

Electric specification of the emergency stop related output circuit is 100mA/24V or less. Don't connect the equipment except for this range.

CAUTION

Be sure to perform wiring correctly. If there are mistakes in the wiring, the robot may not stop when the emergency stop button is pressed and there will be a risk of damage or personal injury occurring.
After wiring, be sure to press each of the installed emergency stop switches and check whether the emergency stop circuit works properly.

CAUTION

Be sure to duplicate connection of the emergency stop, door switch and mode selector switch. If not duplicated, these functions may fail due to a broken relay used by customer, etc.

^{*1)} The minimum load electric current of the switch is more than 5mA/24V.

6.2 Working environment

Avoid installation in the following places as the equipment's life and operation will be affected by the ambient environment conditions. When using in the following conditions, the customer must pay special attention to the preventive measures.

(1) Power supply

- Where the voltage fluctuation will exceed the input voltage range.
- Where a momentary power failure exceeding 20ms may occur.
- Where the power capacity cannot be sufficiently secured.

CAUTION

Please use the controller with an input power supply voltage fluctuation rate of 10% or less. In the case of 200 VAC input, for example, if the controller is used with 180 VAC during the day and 220 VAC during the night, turn the servo off once and then on again.

If this is not performed, an excessive regeneration or overvoltage error may occur.

(2) Noise

- Where a surge voltage exceeding 2000V, 5kHz (equivalent to EN61000-4-4) may be applied on the primary voltage. Near large inverters, high output frequency oscillator, large contactors and welding machines. Static noise may enter the lines when this product is used near radios or televisions. Keep the robot away from these items.

(3) Temperature and humidity

- Where the atmospheric temperature exceeds 40 degree , lower than 0 degree.
- Where the relative humidity exceeds 85% RH or below 45% RH, or condensation may occur.
- Where the robot will be subject to direct sunlight or near heat generating sources such as heaters.

(4) Vibration

- Where excessive vibration or impact may be applied. (Use in an environment of 34m/s² or less during transportation and 5m/s² or less during operation.)

(5) Installation environment

- Where strong electric fields or magnetic fields are generated.
- Where the installation surface is rough. (Avoid installing the robot on a bumpy or inclined floor.)
- Where there is heavy powder dust and oil mist present.

6.3 Precautions for handling

- (1) The robot has brakes. If the robot is moved with an excessive external force while the brake is applied, the robot accuracy may decrease, a backlash may occur, or the reduction gear may be damaged.
- (2) Avoid moving the robot arm by hand. When unavoidable, gradually move the arm. If moved suddenly, the accuracy may drop due to an excessive backlash, or the backed up data may be destroyed.
- (3) Note that depending on the posture, even when within the movement range, the wrist section could interfere with the base section. Take care to prevent interference during jog. ^{*1)}
- (4) The robot arm consists of precision parts such as bearing. Lubricants such as grease are also applied on the moving parts to keep the mechanical accuracy. In a cold start under low temperature or in the first start after being stored for one month or longer, lubricants may not be spread enough. Such condition may lower the positioning accuracy, cause servo and overload alarms, and early wearing of the moving parts. To avoid such situation, perform warm-up operation of the machine at a low speed (at about 20% of normal operation speed). Move the robot arm from the lower to the upper limit of the movable range with the 30 degree joint angle or more for about 10 minutes. After that, speed up the operation gradually. Please use the warm-up operation. (About the details of the warm-up operation, refer to "INSTRUCTION MANUAL/Detailed explanations of functions and operations".)
- (5) The robot arm and controller must be grounded with 100Ω or less (class D grounding) to secure the noise resistance and to prevent electric shocks.

*1) Jog operation refers to operating the robot manually using the teaching pendant.

- (6) The items described in these specifications are conditions for carrying out the periodic maintenance and inspections described in the instruction manual.
- (7) When using the robot arm on a mobile axis or elevating table, the machine cables enclosed as standard configuration may break due to the fixed installation specifications. In this case, use a flexed type cable which is one of the optional replaceable machine cables.
- (8) If this robot interferes with the workpiece or peripheral devices during operation, the position may deviate, etc. Take care to prevent interference with the workpiece or peripheral devices during operation.
- (9) The hanging installation jig can be borrowed from the maker. Order to dealer when need.
- (10) Do not attach a tape or a label to the robot arm and the controller. If a tape or a label with strong adhesive power, such as a packaging tape, is attached to the coated surfaces of the robot arm and controller, the coated surface may be damaged when such tape or label is peeled off.
- (11) If the robot is operated with a heavy load and at a high speed, the surface of the robot arm gets very hot. It would not result in burns, however, it may cause secondary accidents if touched carelessly.
- (12) Do not shut down the input power supply to stop the robot. If the power supply is frequently shut down during a heavy load or high-speed operation, the speed reducer may be damaged, backlash may occur, and the program data may be destroyed.
- (13) If the robot collides with the mechanical stopper during automatic operation due to incorrect origin settings or other reasons, parts of the mechanical stopper or the reduction gear or other mechanical parts may need to be replaced. For parts replacement, contact Mitsubishi Electric or your local sales representative. If the robot is continued to be used with damaged mechanical parts or reduction gear, the degree of their damage may increase.
- (14) During the robot's automatic operation, a break is applied to the robot arm when the input power supply is shut down by a power failure, for instance. When a break is applied, the arm may deviate from the operation path predetermined by automatic operation and, as a result, it may interfere with the mechanical stopper depending on the operation at shutdown. In such a case, take an appropriate measure in advance to prevent any dangerous situation from occurring due to the interference between the arm and peripheral devices.
Example) Installing a UPS (uninterruptible power supply unit) to the primary power source in order to reduce interference.
- (15) Do not conduct an insulated voltage test. If conducted by mistake, it may result in a breakdown.
- (16) Fretting may occur on the axis which moving angle or moving distance move minutely, or not moves. Fretting is that the required oil film becomes hard to be formed if the moving angle is small, and wear occurs. The axis which not moved is moving slightly by vibration etc. To make no fretting recommends to move these axes about once every day the 30 degree or more, or the 20mm or more.
- (17) The United Nations' Recommendations on the Transport of Dangerous Goods must be observed for transborder transportation of lithium batteries by air, sea, and land. The lithium batteries (ER6) used in Mitsubishi industrial robots contain lithium and fall under the definition.
When the lithium batteries are shipped for storage, etc., they will be classified as Class 9: Miscellaneous dangerous substances and articles. Please contact your transportation company and must provide appropriate transport safety measures as the customer's consignor.
- (18) If the air supply temperature (primary piping) used for the tool etc. is lower than ambient air temperature, the dew condensation may occur on the coupling or the hose surface.
- (19) When fumigants that contain halogen materials such as fluorine, chlorine, bromine, and iodine are used for disinfecting and protecting wooden packaging from insects, they cause malfunction when entering our products. Please take necessary precautions to ensure that remaining materials from fumigant do not enter our products, or treat packaging with methods other than fumigation (heat method). Additionally, disinfect and protect wood from insects before packing products.

6.4 EMC installation guideline

6.4.1 Outlines

The EMC directive is coerced from January 1, 1996, and it is necessary to attach the CE mark which shows that the product is in conformity to directive.

Since the industrial robot is the component of the automation system, it considers that the EMC directive is not the target product of the direct. However, because it is one of the main components, introduces the method and components of the measures for conforming the automation system to the EMC directive.

And also we are carrying out the qualification test about the conformity of the EMC directive under the environment based on the contents of this document. However, the noise level is changed by the kind of equipment to be used, the layout, the construction of the controlling board, the course of wiring, etc. Therefore, please confirm by the customer eventually.

6.4.2 EMC directive

The Mitsubishi Electric industrial robot follows the European EMC directive. This technical standard regulates the following two items.

- (1) Emission (EMI: Electromagnetic Interference)..... The capacity not to generate the disturbance noise which has a bad influence outside.
- (2) Immunity (EMS: Electromagnetic Susceptibility) ... The capacity which does not malfunction for the disturbance noise from the outside.

Each contents are shown below.

Item	Name	Contents	Testing technical-standard number
Emission (EMI)	Radiative noise disturbance	The electromagnetic noise etc. which are emitted to environs.	EN61000-6-4: 2007/A1: 2011 EN61000-6-2: 2005 EN61800-3: 2004/A1: 2012
	Electrical-conduction noise disturbance	The electromagnetism noise etc. which flow out of the power-supply line.	
Immunity (EMS)	Electrostatic discharge immunity test	The noise from the electrified human body.	
	Radiated, radio-frequency, electromagnetic field immunity test susceptibility test	The electromagnetism noise from the transceiver, the broadcasting station, etc.	
	Electrical fast transient burst immunity test	The relay noise or the electromagnetism noise etc. which are caused in power-supply ON/OFF.	
	Immunity to conducted disturbances induced radio-frequency fields	The electromagnetism noise etc. which flow in through the power source wire and the grounding wire.	
	Power frequency magnetic field immunity test	The electromagnetism noise with a power supply frequency of 50/60 Hz etc.	
	Voltage dips, short interruptions and voltage variations immunity test	The noise in the variation of the source voltage of the power dispatching, etc.	
	Surge immunity test	The electromagnetism noise by the thunderbolt, etc.	

6.4.3 EMC measures

There are mainly following items in the EMC measures.

- (1) Store into the sealed metal board.
- (2) Grounding all the conductor that have floated electrically (makes the impedance low).
- (3) Wiring so that the power source wire and signal wire are separated.
- (4) Use the shield cable for the cable which wired outside of the metal board.
- (5) Install the noise filter.

To suppress the noise emitted out of the board, be careful of the following item.

- (6) Ensure grounding of the equipment.
- (7) Use the shield cable.
- (8) Separate the metal board electrically. Narrows the distance/hole.

The strength of electromagnetic noise emitted to environment is changed a lot by the shielding efficiency of cable and the distance of metal board, so it should be careful.

6.4.4 Component parts for EMC measures

(1) Ferrite core

The ferrite core is mounted by the plastics case as one. It can attach by the one-touch, without cutting the cable. This has the effect in the common-mode noise. The measures against the noise are made not influential in the quality of the signal.

There are the following as an example.

Maker: SEIWA ELECTRIC MFG. CO., Ltd.

Type	Outside dimension (mm)				Applicable cable diameter [max] (mm)
	A	B	C	D	
E04SR401938	61	38	19	40	φ19.0
E04SR301334	39	34	13	30	φ13.0

Maker: KITAGAWA INDUSTRIES CO., LTD.

Type	Applicable cable diameter (mm)
RFC-20	Max. φ20
GTFC-41-27-16	Max. φ26
RFC-H13	φ12.5 - 13.5

Outside dimension (Unit: mm)

(2) Line noise filter

Install a line noise filter to AC input line.

Type: SUP-EL20-ER-6

Maker: OKAYA ELECTRIC INDUSTRIES CO., LTD.

7 Appendix

Appendix 1: Inertia calculation method

An allowable moment of inertia in the mechanical interface at the tip of the robot arm is determined. If a load exceeding the allowable moment of inertia is put, on the tip of the arm, vibration during operation and an overload alarm may occur. Therefore, consider the matching/appropriateness of the hand and load to be mounted on the tip of the arm for the robot specifications when you select a robot. The following describes the load inertia calculation method.

For the vertical multi-joint robot, consider the load moment and the load inertia on the wrist axes (J4 to J6 axes). To consider them, calculate the load moment and load inertia applied on each of J4 to J6 axes in consideration of the posture of the hand and workpiece. The following figures show the examples.

(1) Load moment calculation example (for J5 axis with flange facing downwards)

The items shown in the right picture are defined as follows.

Hand mass : W_1 (kg)

Center of gravity of the hand : L_1 (m)

Workpiece mass : W_2 (kg)

Center of gravity of the workpiece : L_2 (m)

The load moment applied to the J5 axis is calculated as follows.

Where g is gravitational acceleration (m/s^2).

$$\begin{aligned} \text{Load moment about the J5 axis : } M \text{ (Nm)} \\ = W_1 \times L_1 \times g + W_2 \times L_2 \times g \end{aligned}$$

Check that the value of M is equal to or less than the allowable load moment of the target model.

(2) Load inertia calculation example (for J6 axis)

The items shown in the right picture are defined as follows.

Hand mass : W_1 (kg)

Distance between the center of J6 axis and the center of gravity of the hand : L_1 (m)

Workpiece mass : W_2 (kg)

Center of gravity of the workpiece : L_2 (m)

Assume that both hand and workpiece are rectangle. When their surface areas can be expressed as follows, respectively: $a_1 \times b_1$, and $a_2 \times b_2$ (where a = height, b = width), the load inertia about the J6 axis is calculated as follows.

$$\begin{aligned} \text{Load inertia about the J6 axis of the hand : } I_1 \text{ (kg}\cdot\text{m}^2\text{)} \\ = I_{z1} + W_1 \times L_1^2 = W_1 \times (a_1^2 + b_1^2)/12 + W_1 \times L_1^2 \end{aligned}$$

$$\begin{aligned} \text{Load inertia about the J6 axis of the workpiece : } I_2 \text{ (kg}\cdot\text{m}^2\text{)} \\ = I_{z2} + W_2 \times L_2^2 = W_2 \times (a_2^2 + b_2^2)/12 + W_2 \times L_2^2 \end{aligned}$$

$$\text{Total load inertia about the J6 axis of both hand and workpiece : } I \text{ (kg}\cdot\text{m}^2\text{)} = I_1 + I_2$$

Check that the value of I is equal to or less than the allowable load moment of the target model.

Note) When the robot changes its posture significantly in a direction other than the vertical downward direction, check the load moment inertia about the J4 axis as well.

Appendix 2: Classification of functions using external input/output signals

Before using the functions, note the following.

Table 7-1: Classification of functions using external input/output signals

Classification	Function	Description
Safety signal	Emergency stop input	Detects emergency stop inputs. The safety diagnosis function for the emergency stop input circuit makes the STO function meet the requirements of Category 4, Performance Level e. At factory settings, the STO function meets the requirements of Category 3, Performance Level d. To make the STO function meet the requirements of Category 4, Performance Level e, change the parameter setting by referring to Page 111, "Appendix 3: Safety diagnosis function (Test pulse diagnosis)" .
	Mode selector switch input	Switches the controller mode between MANUAL and AUTOMATIC.
	Door switch input	Receives the status of the switch installed on the door of the safety fence to detect the opening of the door.
Non-safety signal	Emergency stop output	Monitors whether the robot is in the emergency stop state.
	Mode output	Monitors whether the robot operates in MANUAL or AUTOMATIC mode.
	Robot error output	Monitors the error status of the robot.
	Additional axis synchronization output	Synchronizes the state of the additional axes (servo ON/OFF) with that of the robot arm. For details, refer to Page 52, "3.8 Additional axis synchronization output" .

Appendix 3: Safety diagnosis function (Test pulse diagnosis)

This function enables diagnosis of external wiring by pulse signals output from the emergency stop ports (EXTEMG11, EXTEMG21). Changing parameter TPOEMG allows EXTEMG11 and EXTEMG21 to output off-pulses regularly. The width of output pulses is always approximately 20 ms. Checking regularly the test pulses inside the robot controller enables confirming the correct operation of the emergency stop lines.

When using this function, connect emergency stop switches by seeing Fig. 7-2.

Make sure to prevent test pulses of this function from causing faulty operation of peripheral devices.

Fig.7-1: Test pulse diagnosis

Table 7-2: Parameter details

Item	Description
Parameter name	TPOEMG
Function	This enables configuring the pulse output function for outputting test pulse signals from emergency stop ports (EXTEMG11, EXTEMG21).
What parameter settings means	0: Outputs no test pulses 1: Outputs test pulses
Default	0
